TO OUR SHAREHOLDERS

SUPERVISORY BOARD REPORT

We continuously monitored the Board of Management's conduct of the business on the basis of regular reports and we informed ourselves about the state of affairs in several meetings. In addition, the Supervisory Board discussed the company's risk situation and strategy in detail. The Audit and Risk Committee of the Supervisory Board pre-audited the Annual Financial Statements and the Management Report and advised the full Supervisory Board to endorse the results of the audit by PricewaterhouseCoopers GmbH Wirtschaftsprüfungsgesellschaft, Munich. The Supervisory Board followed the Audit and Risk Committee's recommendation. PricewaterhouseCoopers GmbH Wirtschaftsprüfungsgesellschaft issued an unqualified auditor's certificate for the annual financial statements for the 2024 financial year. In its meeting on April 28, 2025, the Supervisory Board approved the annual financial statements prepared by the Board of Management, which are hereby confirmed.

Mr. Christopher Townsend resigned as a member and Chairman of the Supervisory Board with effect from August 8, 2024. The Extraordinary General Meeting of Allianz Global Corporate & Specialty SE on August 9, 2024 appointed Dr. Roman Sauer as a new member of the Supervisory Board with effect from August 9, 2024. At the extraordinary meeting of the Supervisory Board held on August 9, 2024, Dr. Thomas Naumann was elected Chairman of the Supervisory Board.

Mr. Petros Papanikolaou resigned from his position as a member of the Board of Management with the consent of the Supervisory Board with effect from midnight on August 8, 2024. The Supervisory Board appointed Mr. Christopher Townsend to the Board of Management with effect from August 9, 2024. As Mr. Papanikolaou's successor, Mr. Townsend is responsible for the Chief Executive Officer Department. Mr. Townsend's appointment to the Board of Management of our company was made on an interim basis until the permanent successor as Chairman of the Board of Management of Allianz Global Corporate & Specialty SE is appointed.

The Supervisory Board appointed Mr. Thomas Lillelund as member of the Board of Management effective March 17, 2025. Mr. Lillelund is responsible for the Chief Executive Officer Department.

Dr. Sauer resigned from his position as a member of the Supervisory Board with effect from midnight on March 20, 2025. The Extraordinary General Meeting of Allianz Global Corporate & Specialty SE on March 21, 2025 appointed Mr. Christopher Townsend as a new member of the Supervisory Board with effect from March 21, 2025. At the extraordinary meeting of the Supervisory Board held on March 21, 2025, Mr. Townsend was elected Chairman of the Supervisory Board.

Dr. Renate Strasser resigned from her position as a member of the Board of Management with the consent of the Supervisory Board with effect from November 4, 2024. Mrs. Tracy Ryan resigned from her position as a member of the Board of Management with the consent of the Supervisory Board with effect from December 31, 2024. The Supervisory Board appointed Mrs. Vanessa Maxwell as member of the Board of Management effective December 1, 2024. As Mr. Shanil Williams' successor, Mrs. Maxwell is responsible for the Chief Underwriting Officer Department. Mr. Williams will succeed Mrs. Ryan as Chief Regions Officer - Americas on the Board of Management effective January 1, 2025. The Supervisory Board appointed Mr. Aymeric Martin as member of the Board of Management effective April 1, 2025. Mr. Martin will assume the role of Chief Risk and Resilience Officer.

The Supervisory Board expresses its cordial thanks to all employees and the Board of Management for their extraordinary commitment to Allianz Global Corporate & Specialty SE in the past year.

Munich, April 28, 2025

MANAGEMENT REPORT OF AGCS SE

B

BUSINESS ENVIRONMENT

Economic environment 2024¹

The global economy enjoyed another year of solid growth in 2024. It proved resilient in the face of geopolitical challenges, growing 2.8%. In particular, the US economy once again demonstrated its resilience with growth of 2.8%, thanks in large part to strong consumer spending. Europe and China faced structural challenges, resulting in comparatively moderate economic growth of 0.7% for the euro-zone and 5.0% for China. Towards the end of the year, inflation in most of the regions decreased and approached the inflation target of 2.0%. China, which continued to face excessively low inflation, remained an exception.

Central banks responded to falling inflation by lowering interest rates. The European Central Bank led the way with a cut of 100 basis points to 3.0% (deposit rate). The Federal Reserve also lowered its key interest rate by 100 basis points to 4.5% (upper range) despite the strength of the US economy. Long-term interest rates did not follow these movements, as concerns about the ever-increasing levels of government debt were on the rise. German government bond yields rose 33 basis points over the year to 2.4% at year-end, while US government bond yields rose 71 basis points to 4.6%. There was also a high level of volatility during the year.

Business environment 2024 for the insurance industry

In the Property-Casualty division, lower inflation and continued rate increases reduced the pressure on underwriting results. However, in some lines of business, such as liability in the US, claims inflation was still high in 2024, delaying the ability of many insurers in some markets to return to profitability as a result of reserve strengthening. Premium growth continued to be robust, which was mainly driven by price increases. Insured losses from natural catastrophes exceeded USD 100 billion for the fifth consecutive year.

All divisions benefited from improved investment results, which were driven by generally higher long-term interest rates.

The relentless rise of artificial intelligence (AI) technology continued through 2024, leading to a variety of AI applications across the insurance value chain, from product development and underwriting to customer service and claims management. The insurance industry continued its efforts and investments in climate protection, climate change adaptation and risk prevention in the face of increasing natural and cyber hazards. This contributes to a more resilient and sustainable society.

Business development of AGCS SE

The Allianz Global Corporate & Specialty SE (AGCS SE) business unit includes the national and international corporate business, as well as the international specialty Marine, Aviation, Energy and Entertainment insurance lines. All of these areas are covered in both the direct and the indirect insurance business.

With its global focus and the extensive product range, AGCS SE is in a position to offer appropriate insurance solutions combined with comprehensive customer service. This also includes a competent, global service in the event of a claim, transnational coverage concepts within the framework of international insurance programs, risk consulting and innovative solutions in the areas of captive, fronting and alternative risk transfer.

Despite a decline in net premiums to € 1,551.4 (1,839.7) mn, the further improvement in the claims and cost situation led to a significantly higher net underwriting profit of € 221 (profit of: € 52) mn than in the previous year.

The slight decrease in the investment result to € 352 (383) mn is mainly due to lower write-ups and lower current income from affiliated enterprises and funds compared to the previous year.

AGCS SE ended the year 2024 with a profit transfer to Allianz SE in the amount of € 379 (393) mn.

AGCS SE's results under commercial law were as follows

Condensed statement of profit or loss

€ mn

	2024	2023
Gross premiums written	6,523	6,295
Gross premiums earned	6,397	6,215

¹ At the time this report was published, not all general market data for the year 2024 used in the chapter Business environment was final. Also, please note that the information provided in this chapter is based on our estimates.

Underwriting result

On January 1, 2024, the company entered into a new quota share reinsurance treaty with Allianz SE, Munich (hereinafter referred to as: "UK quota share reinsurance treaty"). This treaty covers the business of the UK branch and cedes 40% of the risks of all lines of business (excluding alternative risk transfer solutions), after prior reinsurance. During the financial year, the company entered into a new quota share reinsurance treaty with Allianz Risk Transfer AG, Schaan, for the alternative risk transfer solutions business underwritten by our UK branch. This contract cedes 100% of the risks after prior reinsurance.

The net income and expenses for the financial year presented below are not fully comparable with those of the prior year, due to these new quota share reinsurance treaties.

Gross premiums written increased by 3.6% over the prior year, driven by new business and rate increases. This was particularly evident in the Other Property and Marine insurance lines. There were also positive developments in the health insurance business, in particular as a result of fronting agreements in the Asian branches. The increase in gross premiums was driven in particular by direct insurance business, which generated higher premiums of € 3,827.2 (3,651.5) mn. Premium growth in the indirect insurance business was modest at € 2,696.1 (2,643.4) mn.

In contrast to gross premiums written, net premiums earned decreased to € 1,551.4 (1,839.7) mn, primarily as a result of the newly implemented UK quota share reinsurance treaty, which reduced net premiums earned by € 327.4 mn.

In addition, higher cessions of mandatory quota share reinsurance in Other Property and Other Insurance contributed to the decrease in net earned premiums.

The net claims expenses for the financial year fell to € 932.6 (1,197.9) mn. This was primarily attributable to a reduction in net financial year losses to € 1,023.5 (1,221.2) mn and was influenced by the newly implemented UK quota share reinsurance treaty with a volume of € 227.3 mn. Despite an increased impact of catastrophe losses, net losses for the year were lower overall.

In addition, there was a higher net run-off gain of € 90.9 mn (profit of € 23.3 mn), primarily due to favorable claims development in the Marine and Aviation, Fire and Other Property, and Other Insurance lines of business. Please refer to the Reserve Risks section of the Risk and Opportunity Report for a statement on run-off results.

As a result of the significantly lower financial year losses combined with a higher run-off gain, the net loss ratio on the balance sheet fell to 60.1% (65.1%).

The net expense ratio improved from 24.4% to 19.9% due to lower net underwriting expenses of € 309.1 mn (449.3mn). Lower acquisition costs in the alternative risk transfer line of business as a result of lower gross premiums written contributed to this decrease. In addition, higher reinsurance commissions received from the newly implemented UK quota share reinsurance treaty and from quota share reinsurance in the Other Property, Other Insurance and Fire lines of business reduced net acquisition costs.

As in the previous year, the reinsurance balance resulted in a loss of € 1,221.2 mn (€ 1,028.0 mn) for the company. This comprised

premiums written ceded in reinsurance of € 4,845.3 mn (€ 4,375.4 mn), reinsurers' share of claims expenses of € 2,717.4 mn (€ 2,579.0 mn) and operating expenses of € 906.7 mn (€ 768.4 mn).

The company reported a net underwriting profit before equalization reserve of € 228.7 mn (profit of € 116.7 mn). € 7.4 mn (allocation of € 64.8 mn) was allocated to the equalization reserve and similar provisions. The reduction in underwriting risks due to the new UK quota share reinsurance treaty introduced in the year under review resulted in a lower allocation to the equalization reserve of € 82.2 mn.

Reinsurance business ceded

The reinsurance structure was essentially unchanged in 2024, with the exception of the introduction of the UK quota share reinsurance treaty. For captive and fronting business, 100% of gross underwritten risks are ceded on an optional basis. Depending on risk tolerance or available capacity, the reinsurance strategy for the other lines of business is to place all or a portion of the individual risks in the reinsurance market through facultative reinsurance. The business remaining with AGCS SE after these facultative cessions is protected by a global coverage program that consists of various proportional and non-proportional obligatory reinsurance covers based on individual risks as well as accumulation cover (in particular in the area of natural catastrophe risks). Compared to the prior year, higher cession rates were agreed for quota share reinsurance in Other Property and Other Insurance.

In the financial year, the company continued to cede parts of its insurance business to certain Group companies and external reinsurers. Effective January 1, 2015, we entered into a quota share reinsurance treaty with our largest reinsurer, Allianz SE, ceding 100% of the total direct and assumed business of our German head office. The contract continued unchanged in the year under review. Overall, the volume of premiums ceded to Allianz SE increased due to the new UK quota share reinsurance treaty introduced in the year under review.

The retention rate for net premiums written, measured in terms of gross premiums written, fell to 24.3 (29.6)%. The new UK quota share reinsurance treaty introduced in the year under review was the main driver of this change.

Direct insurance business¹

Personal Accident and Health Insurance

€ mn

	2024	2023	Change
Gross premiums written	163	104	60
Net premiums earned	1	2	-1
Net incurred claims	-1	-1	0
Net underwriting expenses	5	5	0
Other net underwriting positions	0	0	0
Underwriting result before equalization reserve and similar reserves	5	6	-1

In the year under review, the increase in gross premiums in **Personal Accident and Health Insurance** was again primarily driven by

¹ The following breakdown refers to the insurance segments, insurance branches and types defined in Section 51 (4) RechVersV.

health insurance. Health insurance business was written as fronting business in the Asian branch offices and, as in the previous year, was generally ceded at 100%, with the result that net premiums earned did not follow this increase. The insurance line reported a slightly lower underwriting profit than in the prior year, while net claims expenditure remained at the same level.

Liability insurance

€ mn

	2024	2023	Change
Gross premiums written	1,422	1,401	22
Net premiums earned	415	475	-60
Net incurred claims	-239	-431	192
Net underwriting expenses	-68	-80	12
Other net underwriting positions	0	-3	3
Underwriting result before equalization reserve and similar reserves	108	-39	147

Gross premiums written in **Liability Insurance** were slightly higher than in the prior year. Net premiums earned decreased as a result of higher cessions for the newly implemented UK quota share reinsurance treaty. In contrast to the prior year, a run-off gain and lower net financial year losses due to the UK quota share reinsurance resulted in a significant decrease in net incurred claims. This resulted in a significantly improved underwriting result for the year.

Motor Liability Insurance, Other Motor Insurance

€ mn

	2024	2023	Change
Gross premiums written	28	30	-1
Net premiums earned	0	-1	1
Net incurred claims	-3	-2	-2
Net underwriting expenses	3	3	0
Other net underwriting positions	0	0	0
Underwriting result before equalization reserve and similar reserves	0	0	-1

Motor Liability and Other Motor Insurance remained stable with a slight decrease in gross premiums written. As in previous years, the entire portfolio was mainly underwritten by our Hong Kong branch office as fronting business and 100% of the business was ceded. As in the previous year, the insurance line reported a balanced result.

Fire Insurance and Other Property Insurance

€ mn

	2024	2023	Change
Gross premiums written	1,295	1,254	41
Net premiums earned	233	283	-50
Net incurred claims	-220	-201	-20
Net underwriting expenses	-15	-45	31
Other net underwriting positions	-2	-5	2
Underwriting result before equalization reserve and similar reserves	-5	32	-37

Fire and Other Property Insurance recorded an increase in gross premiums written but a decrease in net premiums earned, primarily due to the newly implemented UK quota share reinsurance treaty.

Net claims expenditures were higher, primarily due to an increase in financial year losses in Other Property insurance related to alternative risk transfer solutions. Acquisition costs were lower than in the previous year. The positive effect resulted from higher reinsurance commissions due to the newly implemented UK quota share reinsurance treaty. Following an underwriting profit in the prior year, Fire and Other Property Insurance recorded a small loss in the year under review.

Marine and Aviation Insurance

€ mn

	2024	2023	Change
Gross premiums written	609	580	29
Net premiums earned	182	208	-26
Net incurred claims	-117	-112	-5
Net underwriting expenses	-69	-80	11
Other net underwriting positions	-3	-3	0
Underwriting result before equalization reserve and similar reserves	-6	13	-20

Gross premiums written in **Marine and Aviation Insurance** benefited from positive premium development in Marine, while net premiums earned decreased due to the newly implemented UK quota share reinsurance treaty. There was a slight increase in net claims expenditure, which was driven by lower run-off gains in Marine Insurance and Aviation Liability Insurance. Overall, the insurance line ended the year with a slight underwriting loss, as the decrease in net premiums earned was not offset by a decrease in incurred claims.

Other Insurances

€ mn

	2024	2023	Change
Gross premiums written	307	282	25
Net premiums earned	59	81	-23
Net incurred claims	-8	-73	65
Net underwriting expenses	2	-17	19
Other net underwriting positions	-9	-11	3
Underwriting result before equalization reserve and similar reserves	44	-19	63

Other Insurances recorded an increase in gross premiums written. The new UK quota share reinsurance treaty introduced in the year under review was the reason for the decrease in net premiums earned. The lower claims expenses were attributable to lower financial year losses. Underwriting expenses increased due to the reinsurance commission received on the UK quota share reinsurance treaty. Overall, this resulted in a clearly positive underwriting result after a loss in the previous year.

Reinsurance business assumed¹

Casualty Insurance

€ mn

	2024	2023	Change
Gross premiums written	8	6	2
Net premiums earned	2	2	0
Net incurred claims	-3	-2	-1
Net underwriting expenses	-2	-1	-1
Other net underwriting positions	0	0	0
Underwriting result before equalization reserve and similar reserves	-3	-2	-1

Casualty Insurance recorded a slight increase in gross premiums written, which did not impact net premiums earned. Combined with a slight increase in claims expenses and higher underwriting expenses, this resulted in an underwriting loss for the insurance line.

Liability Insurance

€ mn

	2024	2023	Change
Gross premiums written	574	615	-40
Net premiums earned	116	154	-38
Net incurred claims	-111	-42	-69
Net underwriting expenses	-52	-54	2
Other net underwriting positions	-2	-4	2
Underwriting result before equalization reserve and similar reserves	-49	54	-103

Gross premiums written in **Liability Insurance** were significantly lower than in the prior year. This was particularly evident in the Entertainment and alternative risk transfer solutions business. Net premiums earned followed this trend, also reflecting the impact of the newly implemented UK quota share reinsurance treaty. Run-off losses, driven by the adverse development of large losses, resulted in increased claims expenditure compared to the prior year. As a result, the insurance line ended the year with an underwriting loss.

Fire Insurance and Other Property Insurance

€ mn

	2024	2023	Change
Gross premiums written	1,464	1,428	36
Net premiums earned	362	392	-30
Net incurred claims	-148	-215	67
Net underwriting expenses	-85	-109	24
Other net underwriting positions	-52	-32	-21
Underwriting result before equalization reserve and similar reserves	77	36	41

Gross premiums written in **Fire and Other Property Insurance** increased as a result of higher premiums in Other Property Insurance. However, the new UK quota share reinsurance treaty resulted in

¹ The following breakdown refers to the insurance segments, insurance branches and types defined in Section 51 (4) RechVersV.

¹ The table refers to the classes and types of insurance listed in Appendix 1 (to §23 BerVersV) Section C.

lower net premiums earned. After a small run-off loss in the prior year, a run-off gain was recorded in the year under review. Combined with lower financial year losses, net incurred claims decreased significantly. Reinsurance commissions received on the UK quota share reinsurance treaty resulted in lower net underwriting expenses. Overall, Fire and Other Property Insurance recorded a higher underwriting profit than in the prior year.

Marine and Aviation Insurance

€ mn

	2024	2023	Change
Gross premiums written	311	281	30
Net premiums earned	108	134	-25
Net incurred claims	-45	-67	22
Net underwriting expenses	-26	-33	7
Other net underwriting positions	-11	-7	-5
Underwriting result before equalization reserve and similar reserves	26	27	-1

In **Marine and Aviation**, gross premiums written increased in the year under review. However, net premiums earned decreased due to increased reinsurance cessions as a result of the newly implemented UK quota share reinsurance treaty. Lower net financial year losses, also due to the UK quota share reinsurance treaty, contributed to the decrease in claims expenditure. Overall, the underwriting profit remained at the previous year's level.

Other insurances

€ mn

	2024	2023	Change
Gross premiums written	340	314	26
Net premiums earned	73	109	-36
Net incurred claims	-37	-53	16
Net underwriting expenses	-2	-38	36
Other net underwriting positions	-2	-12	10
Underwriting result before equalization reserve and similar reserves	32	6	26

Other Insurance recorded an increase in gross premiums written primarily due to higher premiums ceded at 100%. Therefore, this increase had no impact on net premiums earned. The decrease in net premiums earned was particularly pronounced in miscellaneous financial losses. Lower claims expenditure, particularly in financial year losses, together with a significant reduction in acquisition costs, resulted in a higher underwriting profit than in the prior year.

Further information on the management report

The various insurance lines and types² offered are presented in detail on page 55.

Development of investments and investment result

The investment portfolio rose to € 10,439 mn (€10,132 mn) in 2024. Investments in affiliated enterprises and participations increased compared to the previous year due to the issuance of new internal Allianz Group loans in 2024. The portfolio of directly held bearer bonds decreased compared to the previous year.

Development of investments and investment result

€ mn

	2024	2023
INVESTMENT PORTFOLIO		
Investments in affiliated enterprises and participations	3,545	3,134
Directly held properties	60	67
Stocks, units or shares in investment funds and other variable income securities	3,436	3,411
Bearer bonds	2,818	3,004
Mortgage loans	32	44
Other loans	117	132
Bank deposits	219	157
Deposit receivables	213	184
Total	10,439	10,132
INVESTMENT RESULT		
Current investment income	290	309
Gains on the disposal of investments	31	34
Losses on the disposal of investments	-2	-2
Gains from write-ups on investments	57	82
Write-downs on investments	-24	-37
of which on bearer bonds	0	-13
Expenses for the management of investments and for interest expenses	-11	-12
Income from profit transfer agreements	12	9
Costs of loss absorption	0	0
Total	352	383

At a profit of € 352 mn, investment income in the 2024 financial year was slightly lower than in the previous year.

The decrease was primarily attributable to lower current income from affiliated enterprises and funds. In addition, write-ups are lower than in the previous year. As in the previous year, there was a net gain on the disposal of investments.

The fair value of the investments on the 2024 balance sheet date was € 11,025 mn (€ 10,650 mn). Valuation reserves increased to a total of € 586 mn (€ 518 mn).

Other non-underwriting result

The other non-underwriting result showed a gain of € 95.5 mn (€ 36.9 mn), mainly due to the exchange rate movements of the US dollar and pound sterling against the euro.

The non-underwriting result thus amounted to € 256.8 mn (€ 419.8 mn).

Overall result

The tax charge for the financial year (including intra-group charges) amounted to € 99.4 mn (€ 78.7 mn).

The overall result after taxes was a profit of € 378.7 mn (€ 393.0 mn). This profit is transferred to Allianz SE based on the existing control and profit transfer agreement.

Corporate agreements

Allianz SE is the sole shareholder of AGCS SE. A control and profit transfer agreement exists between the two companies.

Equity

At € 1,144.2 mn, equity remained unchanged from the previous year.

As part of the plan agreed with Allianz SE to optimize capital allocation within the Allianz Group, € 380,000 thousand will be withdrawn from the capital reserve pursuant to § 272 (2) No. 4 HGB and transferred to net earnings as of December 31, 2024.

The total distribution of € 380,000 thousand, which will be distributed equally to the no-par value shares entitled to dividend on the day of the Annual General Meeting, will be paid to Allianz SE in 2025 in accordance with the resolution of the Annual General Meeting.

The distribution amount is due for payment on April 29, 2025 (the first business day after the resolution of the Annual General Meeting, see section 58 (4) sentence 3 AktG).

Gross actuarial provisions

Gross actuarial provisions increased by € 1,288.8 mn to € 16,503.3 mn (€ 15,214.5 mn) in the year under review.

The major component of this item is the provision for unsettled insurance claims of € 13,485.0 mn (€ 12,433.4 mn).

Branch offices

AGCS SE maintains branch offices in:

- London, United Kingdom
- Paris, France
- Vienna, Austria
- Copenhagen, Denmark
- Milan, Italy
- Antwerp, Belgium
- Madrid, Spain
- Rotterdam, Netherlands
- Stockholm, Sweden
- Singapore
- Hong Kong, China
- Seoul, South Korea and
- Mumbai, India.

Outsourced functions

Accounting

Accounting functions are primarily provided to the company by the CFO – Accounting, Treasury & Tax unit at the Munich location.

The accounting functions of the foreign branch offices are performed by the company partly locally and partly centrally in

Munich. Support activities are performed by Allianz Technology in Bucharest and Trivandrum (India).

Investment accounting is handled by Allianz SE, Munich.

The collection functions for the company are performed primarily at the Munich location, as well as in London, Paris, Antwerp and by Allianz Technology in Trivandrum (India).

For the branch office in Milan, these functions are provided by Allianz S.p.A.

Investment and asset management and processing of payment transactions

Investment and asset management functions as well as the processing of payment transactions have been transferred to the following companies on the basis of service level agreements:

- Allianz Investment Management SE, Munich

as well as in sub-areas to the following, among others:

- PIMCO Europe GmbH, Munich,
- Pacific Investment Management Company LLC, Newport Beach,
- Allianz Global Investors GmbH, Frankfurt am Main,
- Allianz Global Investors Singapore Ltd, Singapore
- PIMCO Prime Real Estate GmbH, Munich

Information Technology

Since July 1, 2022, the IT of AGCS SE has been completely centralized at Allianz Technology SE, Munich ("IT Supply Outsourcing Agreement").

Similar to the previous year, the IT services provided by Allianz Technology SE on the basis of the outsourcing agreement are treated as a significant outsourcing of the "IT supply function".

Risk management

With its Flexible Risk Platform, Allianz SE provides a basis for calculating risk capital according to the internal model.

These models support the Solvency II financial reporting process for internal and external reporting.

Solvency II services include application maintenance and support, as well as the provision of updates.

Underwriting and claims processing

Coalition Insurance Solution GmbH is the link to brokers and customers (sales) in the field of cyber insurance. The underwriting and pricing of risks is delegated to Coalition within jointly established underwriting guidelines. AGCS SE delegates claims processing to Coalition up to a defined claim amount.

Inclusion, Diversity & Belonging (IDB) are key aspects of ensuring a psychologically safe environment where everyone feels they belong. In 2024, Allianz's voluntary employee-led networks were expanded to include Allianz Beyond. Allianz Beyond joins existing networks such as Allianz Pride, Allianz Neo and Allianz GRACE. These networks work with local IDB councils and host IDB events.

There was also a focus on the introduction of the IDB Mentoring Program and the implementation of the Safe Space sessions.

In 2024, strategic recruiting and talent acquisition was driven to meet current and future business needs.

Recruitment initiatives to promote diversity were strengthened through the creation of various candidate panels for open positions and participation in major diversity events (e.g. NAAIA in the US, ADAN, Sticks & Stones LGBTQ+ and herCAREER in Germany). This reflects our commitment to a diverse and inclusive workforce and the promotion of gender balance throughout the company and in leadership positions.

The global Associate Graduate Program continued and remains an important part of our strategy to develop the next generation of executives.

Allianz's #lead program is a key component of the company's leadership learning portfolio and provides executives with a platform for continuous development. It covers topics such as digitalization, artificial intelligence, hybrid leadership, and mental health. In addition, innovative programs focused on environmental, social and governance (ESG) issues are implemented.

In the 2024 financial year, employees were offered comprehensive family and health benefits with a focus on physical health, mental fitness and holistic well-being.

In collaboration with an external partner, we offered webinars to strengthen mental fitness. Executives received mental health training to promote proactive management in this area.

Mental fitness and health programs were offered in several countries, in collaboration with external partners. In Germany, the EGYM Wellpass was introduced, which provides employees with access to health and fitness facilities as well as health and nutrition services.

In addition, a CSR Volunteering Policy has been introduced, which offers employees the opportunity to volunteer at least 10 hours per year for charities recognized by Allianz.

Employee surveys such as Great Place to Work® and the Allianz Engagement Survey provide valuable feedback on the well-being of employees in a variety of areas. The results form the basis for the ongoing review of training and support offerings and services, with the goal of providing employees with meaningful resources for sustainable well-being. These measures position AGCS SE as an attractive employer and support the company's long-term strategy.

Employees

AGCS SE strives to create a diverse and inclusive work environment that promotes employee satisfaction and performance.

	2024	2023
Employees¹	2,770	2,788
thereof full-time staff	2,683	2,690
thereof other employees (temps and interns)	87	98
Share of women %	50	49
Share of men %	50	51
Proportion of full-time employees %	88	88
Proportion of part-time employees %	12	12
Age (average in years)	41.9	42.1
Time with the Group (average in years)	10.4	10.8

¹Including dormant employee contracts.

Statement on Corporate Management pursuant to § 289f (4) in conjunction with (2) no. 4 HGB

In order to implement the German Act on the Equal Participation of Women and Men in Executive Positions in the Private and the Public Sector, AGCS SE has set the following targets for the proportion of women. The deadline for achieving all of these targets has been set uniformly at December 31, 2027.

- The target for the proportion of women on the Supervisory Board is 33 percent (actual proportion as of December 31, 2024: 33 percent).
- The target for the proportion of women on the Board of Management is 30 percent (actual proportion as of December 31, 2024: 25 percent).
- The target for the proportion of women at the first management level below the Board of Management is 32 percent (actual proportion as of December 31, 2024: 33 percent).
- The target for the proportion of women at the second management level below the Board of Management is 37 percent (actual proportion as of December 31, 2024: 37 percent).

AGCS SE sees the promotion of women in executive positions not only as a fulfillment of legal requirements, but also as an entrepreneurial necessity for long-term success. Equal career development and performance-based placement are key elements of the company's strategy. AGCS SE has been committed to diversity in the company from an early stage and has created the appropriate framework. HR processes were aligned accordingly, and various measures were taken. These range from work-life balance options to talent development through sponsorship and mentoring programs to unconscious bias training.

The corporate governance statements pursuant to §§ 289f and 315d of the German Commercial Code (HGB) form part of the management report. In accordance with § 317 (2) sentence 6 HGB, the

audit of the disclosures is limited to determining whether the disclosures have been made.

Statement concerning the non-financial report pursuant to § 289b (2) sentence 3 HGB

Allianz SE and the Allianz Group meet the statutory requirements for filing a non-financial report and a non-financial group report pursuant to §§ 289b (1) and 315b (1) HGB by publishing a combined separate non-financial report for Allianz SE and the Allianz Group pursuant to §§ 289b (3) and 315b (3) HGB. This report can be found in the 2024 Annual Report for the Allianz Group (www.allianz.com/annualreport).

The publication of this report releases AGCS SE from the obligation to publish its own report pursuant to §§ 341a (1a) sentence 3 and 289b (2) sentence 1 HGB.

RISK AND OPPORTUNITY REPORT

Assuming and managing risks is part of the business model of AGCS SE. Well-developed risk awareness and careful consideration of opportunities and risks are therefore an integral part of controlling the business processes. The key elements of AGCS SE's risk management system are:

- A strong risk management culture, promoted by a solid risk management organization and effective risk management principles (risk governance),
- Comprehensive risk capital and available capital calculations designed to protect the capital base and support effective capital management,
- The integration of capital requirements and risk considerations into the decision-making and management process.
- Monitoring of non-financial risks

This comprehensive approach ensures that risks are appropriately identified, analyzed and managed. The risk appetite is described in the risk strategy and implemented through the limit system contained therein. Strict risk monitoring and regular reporting enable us to identify potential deviations from our risk appetite at an early stage and to take appropriate countermeasures in due course.

Based on AGCS SE's current risk assessment, there are no risks that threaten the company's existence.

Opportunities

The combination of a global presence, a strong focus on professional excellence in underwriting risks and claims handling, as well as continuous productivity growth and process optimization, makes AGCS SE resilient in challenging times, and generally enables it to seize new market opportunities in a rapidly changing business environment.

The network of Allianz offices in more than 70 countries and network partners in other locations enables us to serve clients in more than 200 countries and jurisdictions around the globe. A particular strength of the company is its portfolio-wide diversification of regions and risk types, which enables AGCS SE to provide global capacity for companies' highest and most complex risks.

AGCS SE aims to contribute to the joint success of the Allianz Group through sustainable and profitable growth and cooperation with other companies in the Group. AGCS SE provides insurance and risk management solutions across the full spectrum of industrial insurance, specialty insurance, alternative risk transfer and global insurance programs. AGCS SE focuses primarily on specialized property and casualty insurance solutions that cover complex risks for large multinational corporations around the world.

Since the formation of Allianz Commercial in 2023, AGCS has worked closely with the national Allianz property insurance companies in eleven regions. As part of his duties, the CEO of AGCS SE also assumes the management of Allianz Commercial. Each region is managed by a Commercial Manager who represents Allianz Commercial's integrated model with a holistic customer approach and an enhanced product portfolio to enable a unified market presence across the commercial sector, focusing growth in clearly defined segments and markets to realize targeted growth opportunities.

The new regions are created to take into account the specifics of the markets, the existing broker and distribution relationships and the geographic proximity of the countries involved.

The new integrated approach to corporate insurance responds to the increasing globalization of risks, closes internal structural gaps in market coverage, and expands Allianz's product portfolio at the local level in order to better meet customer needs. Customers and distribution partners will benefit from a standardized approach, with access to harmonized insurance solutions that are coordinated globally and offered locally through a single market interface.

In 2024, a strategic decision was made to refocus Allianz Commercial's activities in the North American market on large corporate and specialty insurance. This is where Allianz Commercial's global capabilities can best be leveraged to reflect the unique characteristics of the North American market. As a result, it was decided to divest the MidCorporate and Entertainment lines of business in the US. This mainly affects the legal entity of AGCS in the US, but also has an impact on AGCS SE, which reflects the consequences of this strategic decision in the context of its global role in various areas, such as reinsurance.

For regulatory reasons and to ensure local continuity, the company names of all AGCS entities and the various Allianz property insurance entities will remain unchanged under the Allianz Commercial structure. The ratings of each company also remain unchanged.

AGCS SE is one of the highest rated industrial insurers in 2024 according to the international rating agencies. (S&P: AA, A.M. Best: A+). The consistently good rating strengthens the confidence of our customers in the stability of AGCS and enhances our credibility with brokers and reinsurers. In this way, it contributes to the achievement of AGCS SE's growth targets.

The continued implementation and execution of Allianz Commercial's integrated model will continue to drive strategic priorities in 2025. The goal is to achieve profitable growth through a consistent strategy and a uniform presence across the entire commercial insurance market, offering customers a differentiated portfolio of products and services. This applies in particular to multinational insurance programs, specialty insurance and climate solutions. In addition, the focus remains on the continued development of technical excellence in underwriting, pricing, modeling and portfolio management. The ongoing IT consolidation as part of the roll-out of the Business Master Platform, along with the introduction of other technical modules (such as GenAI solutions), will support the continued increase in productivity and technical excellence.

The integrated business strategy also represents a cultural transformation: belonging to a global community is intended to foster shared values and global talent development, while preserving local specificities.

Structure of the risk organization

Responsibility for risk management within the Board of Management lies with the Chief Financial Officer (CFO). The Chief Risk Officer (CRO), who reports to the CFO, monitors the risks assumed and regularly informs the Board of Management of AGCS SE about risk-

relevant developments, the current risk profile and capital adequacy. In addition, the Chief Risk Officer ensures that appropriate measures are taken, for instance to reduce or avoid risk positions, and the CRO is responsible for the continued development of risk management processes and risk appetite.

Effective April 1, 2025, AGCS SE will introduce the position of Chief Risk and Resilience Officer (CRRO). Among other things, this function is responsible for risk management.

As an independent risk control function, the Risk Management department systematically monitors identified risks by means of qualitative and quantitative risk analyses and evaluations and ensures the regular or – if necessary spontaneous – reporting of essential risks to the Board of Management of AGCS SE and to Allianz SE.

AGCS SE Risk Committee, chaired by the Chief Financial Officer, reviews all relevant risks on a quarterly basis and agrees on risk mitigation measures and the continued development of risk management processes. The Chief Executive Officer, the Chief Technical Officer, the Chief Underwriting Officer, and the Chief Operating Officer, who are members of the Board of Management, are also members of the AGCS SE Risk Committee, which ensures a close link between risk control and the Board as a whole. The Chief Risk Officer is a member or regular guest of all major committees of the company: Risk Committee, Local Investment Management Committee, Loss Reserve Committee, Underwriting Committee and Reinsurance Committee. He has the right to escalate in each of these functions, but is not entitled to vote.

The risk management of AGCS SE is integrated in the risk control system of the Allianz Group. Its binding guidelines are the Allianz Group Risk Strategy and the Allianz Group Risk Policy of Allianz SE and their local adaptations, as well as additional guidelines for risk management and the modeling of internal risk capital requirements. The Group Risk unit, which is the risk controlling body of the Allianz Group, acts as an additional quality assurance body for the risk management of AGCS SE. The other internal and external control functions are the Supervisory Board and the Legal, Compliance and Audit departments.

Risk strategy and risk reporting

The AGCS SE Risk Policy defines the governance of the risk organization and the risk categories to be monitored at AGCS SE. The resulting risk strategy describes the company's risk appetite. The risk appetite is defined in the risk strategy, based on defined limits for target capitalization at the corporate level as well as limits per risk category. Risk appetite is reviewed annually on the basis of current (forecast) data and risk preferences and is subject to adjustment as necessary.

The limit system also includes requirements to ensure sufficient diversification in order to avoid concentration or accumulation risks to the extent possible.

The quarterly risk report within the scope of the AGCS SE Risk Committee and to the AGCS SE Board of Management provides information on key risk issues during the reporting period and on limit utilization, and is used by management for the systematic control of the current risk profile. Based on this information, the AGCS SE Risk Committee and/or the AGCS SE Board of Management decides on the implementation of risk management measures.

To determine the risk capital requirements under Solvency II, AGCS SE uses the Allianz Group's internal model, which was approved by the Federal Supervisory Authority for Financial Services (BaFin) on November 18, 2015. Model changes approved by BaFin were implemented in subsequent years. The last one was approved on November 11, 2024.

In the opinion of the Board of Management, the current regulatory requirements (Solvency II) are met. The current risk situation is within the company's risk appetite.

Risk categories and control measures

For the purpose of grouping risks, AGCS SE uses internal categories that meet the requirements under Solvency II. Risks at AGCS SE are, in principle, recorded using structured identification and assessment processes. This comprehensive approach ensures that risks are adequately identified, analyzed, evaluated and managed. The top risk assessment process is an important risk assessment process, as it identifies and evaluates the greatest risks to AGCS on an annual basis. These are regularly discussed by the Board of Management and, if necessary, risk mitigation measures are defined. The list of top risks is reviewed quarterly and new risks are added as necessary. The actions to be taken are also monitored. The top risks at the end of 2024 include geopolitical risks, volatility management risks, risks related to changing legal and regulatory requirements, and risks related to insufficient availability of data for business management.

In accordance with the provisions of the AGCS Risk Policy, AGCS SE monitors and manages the following risk categories on a granular level:

- **Underwriting risks**, subdivided into premium risk, i.e., the risk that insurance premiums will not be sufficient to cover future claims, and reserve risk, i.e., the risk that future claims payments from claims already incurred will exceed the loss reserves established for them. Premium risk is further subdivided into natural catastrophe risk, terrorism risk and non-catastrophe risk.
- **Market risks** consist primarily of interest rate, inflation, foreign exchange and credit spread risks, as well as changes in the valuation of strategic investments. Total market risk of AGCS SE after diversification is determined by the latter investment risk.
- **Credit risks** consist of counterparty risk due to insolvency or liquidity difficulties of reinsurers, policyholders, insurance brokers and securities issuers, and rating risks due to loss of value caused by deterioration in the creditworthiness of debtors. Credit risks also include country risks.
- **Operational risks**, i.e. risks arising from inadequacies or errors in processes and systems, or from the failure of controls. They may be caused by technology, employees, the organization, or by external influences, as well as legal and compliance risks.

Risks not captured by the internal model are addressed through a structured identification and assessment process. These are:

- Liquidity risks that describe the risk of non-fulfillment of due payment obligations.

- Strategic risks, i.e. risks arising from strategic business decisions. This also includes the risk that business decisions are not adapted to a changing economic environment.
- Reputational risks, i.e. risks arising from possible damage to the company's reputation as a result of negative public perception.

Underwriting risks: Underwriting risk is at the core of AGCS SE's business and is the result of the performance promise to policyholders.

Premium risks are managed through, among other things, underwriting guidelines. These underwriting guidelines limit the amount of insurance or liability amount per policy. To reflect the volatility of different lines of business, underwriting guidelines vary by line of business.

Reinsurance also plays an important role in managing premium risk. Peak risks are ceded through facultative, proportional and non-proportional reinsurance in accordance with existing underwriting ceilings and limits, which reflect the risk appetite of AGCS SE and are regularly reviewed. In addition, premiums are calculated using technical models. These models are based on current experience and actuarial methods.

All three sub-models of premium risk take into account underwriting ceilings and the existing reinsurance protection.

Event losses from natural catastrophes, which affect multiple risks, pose an additional challenge to risk management. We use specific probability-based modeling techniques and deterministic scenarios to mitigate such risks. This involves correlating portfolio data – such as geographic risk distribution and the value and type of the insured assets – with simulated natural catastrophe scenarios. This approach makes it possible to determine the potential impact and frequency of damage. The probability-based models, which are mainly provided by external suppliers, are regularly updated, while AGCS SE internally expands the coverage of the modeled scenarios as far as possible and continuously improves the level of detail and the quality of the data used. Where such models do not yet exist or are not used, assumptions are made in the risk model based on the insured exposure or existing loss experience. Exposure to natural catastrophes is managed through a global limit system, which is used in underwriting decisions on a risk-by-risk basis. The insights gained are used to optimize the portfolio and, where appropriate, to limit underwritten risks or to calculate the capital efficiency of a risk transfer to the reinsurance market.

Man-made catastrophes, including the risk of terrorism, are modeled using scenarios based on existing exposures, while the model for other losses is based on expected business volumes combined with the company's own loss models.

Reserve risks relate to the settlement of existing claims. This includes the settlement of both known and unknown late claims. Actuarial models based on observed loss experience, which are also used to determine expected claims payments, are used to determine the degree of uncertainty in reserve estimates.

The table below shows the run-off results for the past 10 years.

Run-off results of the last 10 years (in € thousand)

Year	Run-off result current year (1)	Loss reserve ¹ previous year (2)	(1) / (2)
2024	90,877	4,878,650	1.9%
2023	23,272	4,753,168	0.5%
2022	-66,949	4,149,591	-1.6%
2021	81,369	4,034,548	2.0%
2020	-190,965	3,566,957	-5.4%
2019	-55,242	3,271,406	-1.7%
2018	-25,936	2,961,551	-0.9%
2017	178,426	3,004,544	5.9%
2016	205,013	3,020,310	6.8%
2015	224,787	4,875,134	4.6%

¹ excluding the equalization reserve

By applying the principle of prudence in the valuation of the loss reserve under the German Commercial Code, run-off gains are generally expected.

The run-off profit in 2024 was largely driven by favorable claims development in Fire and Other Property, Marine and Aviation and Other Insurance.

Market risks: AGCS SE defines market risk as the risk of loss resulting from changes in market prices or parameters that lead to changes in the valuations of financial assets or liabilities. This includes the change in market prices due to lower market liquidity.

An important part of the insurance business is the investment of insurance premiums. These investments secure existing and future receivables and claims of our customers. In addition, the equity also covers the capital requirements associated with the insurance business.

The following risk types are taken into account in the calculation of market risk:

- **Equity and participation risk** is the potential change in the value of a portfolio due to changes in the price of equity and equity-like positions and changes in the market value of strategic participations.
- **Interest rate risk** is the potential change in the value of a portfolio due to changes in the level of interest rates (more precisely: yield curves).
- **Real estate risk** is the potential change in the value of a portfolio due to changes in the market values of properties.
- **Currency risk** is the potential change in the value of financial assets or liabilities due to fluctuations in exchange rates.
- **(Credit) spread risk** is the potential change in the value of a portfolio due to changes in credit spreads.
- **Inflation risk** is the potential change in the value of a portfolio due to changes in inflation rates.

The investments of AGCS SE are centrally managed by the specialists of Allianz Investment Management SE. The investment strategy is based on the requirements of the asset-liability management of AGCS SE. The investment strategy is implemented by Allianz Investment Management SE within the framework of a risk and limit system for investments specified by AGCS SE. The risk and limit system is reconciled annually, reviewed by the AGCS SE Risk Committee and approved by the Board of Management.

Derivatives and structured products are also used to a limited extent to efficiently implement the investment strategy and to manage risk. Derivative market risk is assessed and managed through value-at-risk calculations, stress testing and limit setting.

AGCS SE's investments are broadly diversified by investment type (equity stakes, fixed-income securities, real estate and alternative investments), credit rating and country.

The vast majority of the company's portfolio was invested in fixed-income securities to cover the financial obligations of the insurance business. These were broadly diversified internationally, in line with our insurance commitments. At year-end, corporate bonds accounted for 39.0% (36.3%) of interest-bearing investments by market value, emerging market bonds for 10.1% (9.3%) and 8.7% (8.9%) of interest-bearing investments were invested in bonds in Singapore and Hong Kong to cover the liabilities of the local branches. Compared to the prior year, the modified duration of investments decreased by 0.2 to 3.3.

Due to the international nature of AGCS SE's business, a large portion of the reserves are denominated in foreign currencies. Overall, foreign currencies accounted for approximately 64.1% (63.0%) of net underwriting reserves, including unearned premiums. The US dollar accounted for the largest share at 32.0% (31.1%), followed by the pound sterling at 24.9% (25.0%). AGCS SE actively manages the resulting currency risks. This process takes into account all balance sheet items subject to currency conversion, including provisions as well as all receivables and liabilities and investments in foreign currencies. In addition to the use of foreign investments to hedge currency exposure, the company also uses FX derivatives within well-defined limits to achieve effective minimization of currency risk. Monthly data is used to manage currency risk.

In order to counter liquidity risks, AGCS SE invests a large part of its investments in liquid government and corporate bonds, and ensures investments are largely maturity-matched. Ongoing monitoring is ensured through rolling wave planning of short, medium and long-term liquidity as well as ongoing liquidity and cash flow analyses.

The risk situation with respect to the capital base and the coverage of the financial liabilities with qualified investments is assessed from two perspectives: external and regulatory requirements on the one hand and internal requirements on the other. Stress tests, which are integrated into an early warning system, are also used to assess the risk situation.

Credit risk: The issuers of AGCS SE's fixed income investments are primarily governments, international corporations and banks. It has set limits with respect to rating classes and in view of concentration risks. Government bonds account for 32.7% (35.7%) and corporate bonds for 39.0% (36.3%) of interest-bearing investments. 86.7% (86.8%) of interest-bearing investments are investment grade. Investments in different currency areas are determined by the structure of the liabilities.

Issuers of fixed-income securities by rating class

%	2024	2023
AAA	15%	18%
AA+ to AA-	31%	25%
A+ to A-	22%	23%
BBB+ to BBB-	19%	20%
Non-investment grade (incl. without rating)	13%	13%
Total	100%	100%

Credit limits are centrally managed by Allianz SE and compliance is monitored by AGCS SE. In addition, AGCS SE has a supplementary internal credit limit system that more accurately reflects its own risk appetite.

Aggregate information on ceded exposures is used to estimate the credit risk arising from reinsurance. In order to minimize credit risk with reinsurers, counterparties with excellent collateral are regularly considered. As of December 31, 2024, approximately 46.9% (47.6%) of AGCS SE's reserves were ceded to reinsurers within the Allianz Group, with the remainder ceded to external reinsurers. The creditworthiness of reinsurers is monitored on an ongoing basis. The reinsurance exposure is reviewed twice a year. Accordingly, 89% (90%) of the exposure was ceded to reinsurers with at least an A rating as of June 30, 2024. Since pools generally do not have their own rating, cessions are made only after a special investigation to determine whether all participating reinsurers meet the Allianz-internal minimum requirements for reinsurance partners and after explicit approval by a team of experts. An internal rating (internal captive rating) is also determined for captives. To further mitigate credit risk, guarantees, deposits or other collateral may be required. At December 31, 2024, ceded reinsurance receivables amounted to € 1,852.0 mn (€ 1,381.3 mn).

In total, receivables from third parties overdue by more than 90 days amounted to € 197.3 mn (€ 195.9 mn) at December 31, 2024 (excluding explicit write-offs of receivables). The average default rate over the last three years was 0.5% (0.7%).¹

Operational risk: The Allianz Group, including AGCS SE, defines operational risk as losses resulting from inadequate or failed internal operating processes or systems, human error and external events. This definition includes legal risks, compliance risks, IT risks including cyber risks, and financial reporting risks. However, it does not include strategic and direct reputational risks.

Operational risks are inherent in all types of products, activities, processes and systems, and cannot be completely avoided. The occurrence of operational losses could have a significant impact on AGCS SE's balance sheet, profit, business objectives, business activities or reputation. AGCS SE's internal risk capital model is also used to determine the risk capital for operational risks and ensures that operational risks are also subject to appropriate capital requirements.

The risk management system for operational risks is based on regular risk and control analyses. The employees of AGCS SE are aware of potential operational risks, and support the control and management of these risks by regularly taking them into account in their daily work. Through a positive risk and control culture within

¹ The default rate is calculated on the basis of the individual value adjustments of receivables from direct insurance business relative to gross premiums written less acquisition costs over a three-year period.

the company, AGCS SE supports all employees and especially decision makers in making identified weaknesses and risks transparent so that appropriate countermeasures are initiated.

The risk management system also takes into account past loss events. The regular monitoring and reporting of such events enables us to draw conclusions and take measures to prevent material losses due to similar operational risks in the future.

The most important measure to mitigate operational risks is the implementation and execution of appropriate and effective controls. Key controls are defined for each material risk in order to manage risks within the risk appetite.

Because of their importance, the quality of the key controls is assessed in a structured manner, i.e., they are tested on a regular and independent basis to ensure that they are (1) appropriately designed to mitigate the intended risks and (2) effectively implemented and applied. In addition, AGCS SE's risk management system for operational risks is supported by activities of functions outside the risk management function, such as information security initiatives, emergency management and compliance initiatives for compliance programs such as antitrust, economic sanctions and anti-money laundering.

Reputational risks are managed by AGCS SE by involving potentially affected divisions such as the Underwriting, Communications and the Legal Department. These include reputational risks related to sustainability. To avoid the risk of damage to the company's reputation due to negative public perception, critical individual cases in underwriting are subject to a coordination process that actively involves the Communications Department and, if necessary, Risk Management. Both the underwriting of insurance risks and the investment process of AGCS follow strict sustainability guidelines.

Additional risks are emerging risks and environmental, social, and governance risks (sustainability risks) as overall risks. These risks are not considered as separate risk categories but have an impact on one or more of the above risk categories.

Concentration risk arises from an unbalanced risk profile due to disproportionate exposure to one or more risks. The identification and mitigation of concentration risks is a key element of AGCS SE's risk management.

The **emerging risks** are understood as the risk of changes in the business environment of AGCS SE, which can lead to unforeseen hazards and losses due to insufficient information and assessments (e.g. new technological developments, climate change, political risks). AGCS SE follows a regular process to monitor newly emerging or changing risks. This process takes into account the results of Allianz SE's analyses. Risks identified as relevant to the AGCS portfolio in this context include, for example, business interruption or loss due to the effects of contaminants such as per- and polyfluoroalkyl substances (PFAS). In terms of business disruptions, this can result from the vulnerability of the ongoing global optimization of supply chains, the use of advanced technologies, power outages due to energy industry restructuring or, for example, increasingly

severe weather events or cyber-attacks. With respect to risks from contaminants, general liability risks and management liability risks may arise in the future as a result of further scientific understanding of their harmfulness and related legislation. For such relevant risks, specific scenario analyses are performed to assess their potential impact on the portfolio and to initiate risk mitigation measures where appropriate.

Understanding sustainability issues enables AGCS SE to mitigate risks and capitalize on opportunities in underwriting, claims settlement, investment management and asset management. AGCS SE has established a solid framework for the management of sustainability risks and has processes in place to incorporate the associated potential impacts into its business strategy.

The management of risks related to sustainability also includes the management of risks related to climate change. AGCS SE continuously assesses climate change risks in existing processes and on the basis of various scenarios over the medium and long-term. The findings are used to derive changes in business or risk strategy at an early stage, if necessary.

The risk management function of AGCS SE continuously monitors and manages the entire risk profile presented and ensures that the risk appetite is maintained at all times.

Own Risk and Solvency Assessment

An essential component of AGCS SE's risk management system is the company's own risk and solvency assessment.

The findings from the company's own risk and solvency assessment process are summarized in a separate report at least once a year. In addition to the results of regular risk reporting, this includes in particular an assessment of the company on the:

- alignment of the risk strategy with the business strategy,
- permanent assurance of solvency,
- key issues in the reporting period
- sensitivity of the solvency ratio to adverse events,
- suitability of the internal model for determining solvency capital requirements,
- overall solvency requirement,
- efficiency of the internal control system,
- continued adequacy of the reported insurance reserves and the appropriate level of such reserves

The risk and solvency situation is assessed not only during the year and at year-end, but also over the entire three-year planning period. AGCS SE expects the capitalization to be in line with the defined risk appetite at all times over the entire planning horizon.

In addition, an extraordinary risk report must be prepared if individual events materially change the risk situation. However, there was no reason to prepare such a separate report in 2024.

The regular report on the company's own risk and solvency assessment as of the December 31, 2023 reporting date was submitted to the supervisory authority BaFin on time in accordance with a resolution of the Board of Management.

OUTLOOK

Economic outlook

We expect the global economy to grow at a steady 2.8% in 2025. Our current view is that the US economy will continue to grow robustly at 2.3%, although political changes could affect this outcome in either direction. Europe and China will face trade policy challenges and the ongoing structural challenges. As a result, we anticipate growth of 1.2% in the euro zone and 4.6% in China. Inflation is expected to continue its downward trend. This could encourage central banks to cut short-term interest rates further. Long-term yields, by contrast, are likely to fall only slightly over the course of the year.

Given the increasingly fragile geopolitical situation, the possibility of disruptive political measures and growing social polarization, the risks of economic slowdown outweigh the risks to growth.

Insurance industry outlook

With inflation expected to level off, premium increases are also likely to be more moderate. As a result, premium growth in the Property and Casualty lines of business will slow down in 2025, but it will still remain at a high level. With climate change continuing unabated, climate-related natural catastrophes, including secondary hazards such as floods and bushfires, will continue to burden the sector.

Rising wages are putting pressure on operating costs, so increasing productivity through fully digitized processes is a key priority for the industry. New technologies are also being used to improve risk analysis and detection, for example. In this way, they are helping to ensure that new and growing risks remain insurable.

Business Outlook¹

The structure introduced in 2023 under the umbrella of the new Allianz Commercial organization was further consolidated in 2024. AGCS SE and the local Allianz property insurance companies have pooled their capacities for industrial and commercial customers in 2023 in order to achieve further profitable growth and market leadership through continuously improved technical excellence and increasing productivity gains. Through a global cooperation model with other national Allianz property insurance entities and a uniform market presence, mid-sized companies as well as global corporations are served in a consistent approach under the brand name "Allianz Commercial". The new structure responds to the increasing globalization of risks, particularly among multinational corporations, and aims to fill gaps in individual markets and expand the product range in each country.

AGCS SE's gross premiums written in the 2024 financial year were slightly above expectations. This was largely attributable to the development of the Alternative Risk Transfer (ART) portfolio with strong new

1_In the "Business Outlook" section, AGCS refers to the AGCS Group, while AGCS SE refers to the specific legal entity.

business and successful portfolio protection, partly driven by higher fronting volumes. In almost all other lines of business, particularly Financial Lines and Cyber, growth was lower than planned due to the hardening of the market. Property underperformed due to a reduction in the share of underwriting business.

Profitability for 2024 was well above expectations, mainly due to the loss ratio. Despite a number of natural catastrophes and large losses in the double-digit million range, the development of the financial year losses was encouraging. The performance of frequency losses was significantly better than expected. As expected, the settlement of prior year claims made a positive contribution to the overall result in 2024, particularly in the Property line. Overall, the loss ratio was well below target. The expense ratio was also better than expected, mainly due to lower brokerage commissions. In total, the underwriting profit before changes in the equalization reserve and similar provisions amounted to € 221 mn in the 2024 financial year, significantly exceeding the forecast profit of € 69 mn.

After the higher than expected gross premiums written of AGCS SE in 2024, a moderate year-on-year decline is assumed for 2025 in light of a softening market. However, the joint market presence within the framework of the new Allianz Commercial approach is expected to further strengthen the business.

In 2025 the underwriting profit before changes in the equalization reserve and similar provisions is expected to decrease significantly - in 2024 it had exceeded expectations. This is reflected in both the loss ratio and the expense ratio. For both ratios, the 2025 assumptions are significantly higher than last year. On the cost side, the ongoing IT consolidation and productivity programs are expected to result in continued productivity improvements. This is offset by investments in various projects.

The build-up of additional balance sheet reserves in recent years has taken into account the impact of the sharp rise in inflation. In 2024, part of this was used to compensate for inflation-related developments that were now reflected in the individual loss reserves and payments for prior-year claims. The inflation rate in 2024 is significantly lower than in the previous year. However, it remains above the historical average. Pressure from energy and material costs was limited, but price increases for services remained the biggest driver, albeit at a moderate pace. Long-tail lines, such as professional liability insurance for directors and senior executives and general liability, are also subject to inflationary pressures as legal defense costs and settlement costs rise. The inflation rate is expected to continue to decline in 2025.

Cyber loss, followed by business interruptions and supply chain disruptions, and natural disasters will continue to be among the top business risks in 2025. This reflects the importance of today's digital economy, the threat of ransomware and extortion, and geopolitical rivalries and conflicts in cyberspace. There is also a strong link between cyber risks and business interruption.

AGCS meets the challenges described above with appropriate reinsurance solutions to limit its own risk. In the renewals at January 1, 2025, the reinsurance market continued to show stable pricing dynamics. However, the market is characterized by caution regarding the adequacy of rate development in light of the continued increase in large losses in the US and a deterioration in claims expenses due to

economic and social inflation. In addition, most lines of business are experiencing a slight reduction in primary insurance rates combined with an increased claims burden from prior years. The trend toward higher deductibles for critical natural catastrophes (e.g., hurricanes, earthquakes) continues.

AGCS SE's proportional reinsurance treaty with Allianz SE for the business of the German branch office, which has been in place since 2015, was renewed in 2023 for 2024 and again in 2024 for 2025. In 2024, an additional proportional reinsurance treaty was entered into with Allianz SE, which cedes 40% of the UK branch's business from the 2024 claims year. This does not include the ART book of the UK branch office which will be fully ceded to ART AG as of the 2024 underwriting year.

The global reinsurance structure introduced in 2016, which includes all AGCS branch offices worldwide, was also fundamentally renewed. However, as in previous years, there were some minor structural changes.

In addition to appropriate reinsurance solutions and ensuring adequate balance sheet reserves, AGCS is addressing current challenges by continuously monitoring trends and implementing business recovery measures, including changes to general terms and conditions, updates to insurable values and adjustments to deductibles. In recent years, the market has responded with positive rate trends. This continued in 2024 across the AGCS portfolio, but with negative developments in certain lines of business and regions and a leveling off in the second half of the year. Natural catastrophe insurance lines, which had performed particularly well in the prior year, were also affected. Overall, AGCS SE achieved positive rate changes in 2024, but this can no longer be expected for 2025.

AGCS is also countering the softening market environment and inflation with a productivity improvement project, which was launched in the second half of 2024. This is a multi-year optimization initiative aimed at creating a leaner and more resilient business model and generating cost headroom for reinvestment.

AGCS SE's investment planning is based on the assumption that the capital markets will remain stable. As the average reinvestment rate of the portfolio is expected to be higher than the book rate, the expected interest income is projected to increase next year. Overall, the investment result is expected to be significantly higher in 2025 than in 2024.

After a significantly higher than expected net income before profit transfer in 2024, a moderate decrease is expected in 2025 compared to the previous year.

The foregoing statements are subject to further developments relating to geopolitical tensions, the general economic outlook, inflationary trends, natural disasters, developments in the capital markets or other factors that may cause actual results to differ materially from those expressed or implied in such statements.

5. Underwriting expenses (net)	22 - 23			-309,077	-449,271
6. Other underwriting expenses (net)				-9,165	-6,422
7. Subtotal				228,710	116,685
8. Changes in the equalization reserve and similar provisions				-7,427	-64,789
9. Underwriting result for own account				221,282	51,895
II. Non-underwriting account					
1. Investment income	24		388,755		434,189
2. Investment expenses	25 - 26		-36,499		-51,226
				352,256	382,962
3. Other income	28		649,616		548,100
4. Other expenses	28		-745,080		-511,247
				-95,464	36,852
5. Profit or loss on ordinary activities				478,075	471,710
6. Taxes on income	29		-96,261		-75,560
including intra-group charges: € 24,437 (2023: € 0) thousand					
7. Other taxes			-3,153		-3,185
				-99,414	-78,745
				378,660	392,965
8. Profits transferred under a profit pooling, profit transfer or partial profit transfer agreement	30			-378,660	-392,965
9. Net income / Net loss				0	0
10. Withdrawal from capital reserves				-380,000	-
11. Net profit for the year				380,000	-

¹ In the prior year, gross premiums earned of € 31,831 thousand were not included. As these were fully ceded, there was no impact on net premiums earned. Due to the omission of the corresponding commissions for ceded reinsurance, the underwriting result was understated by € 2,166 thousand. This error was corrected in the year under review.

NOTES

BUSINESS ACTIVITY AND BASIS OF PRESENTATION

Business activity

AGCS SE is headquartered at Königinstrasse 28, 80802 Munich and is listed in the Commercial Register of the Munich District Court under the number HRB 208312.

The annual financial statements of AGCS SE are published in the company register.

Basis of presentation

The company prepares the annual financial statements and the management report in accordance with the regulations contained in the German Commercial Code (HGB), taking into account the Stock Corporation Law (AktG), the Law on the Supervision of Insurance Enterprises (VAG), and the Government Order on the External Accounting Requirements of Insurance Enterprises (RechVersV).

Unless otherwise stated, the figures in the annual financial statements are in thousand of euro (€ thousand).

ACCOUNTING, VALUATION AND CALCULATION METHODS

Intangible assets

Intangible assets are carried at acquisition and/or production costs less amortization.

Acquired intangible assets are amortized on a straight-line basis over their estimated useful lives. The useful lives are fixed at five and ten years, respectively.

In the event of permanent impairment, unscheduled write-downs are made.

Real estate, real estate rights, and buildings, including buildings on land not owned by AGCS SE

They are carried at acquisition and/or production cost and amortized on a straight-line basis over their estimated useful lives. Unscheduled write-downs are made for expected permanent impairment if the amortized cost exceeds the long-term fair value at the balance sheet date.

Investments in affiliated enterprises and participations

Shares in affiliated enterprises

These are valued at the moderate lower of cost or market principle and carried at amortized cost or a lower long-term fair value.

Write-downs are made if the amortized cost exceeds the market value and the long-term fair value at the balance sheet date.

Loans to affiliated enterprises

This item includes profit participation certificates.

These are valued according to the moderate lower of cost or market principle and carried at amortized cost. Write-downs are made if

the amortized cost exceeds the market value and the long-term fair value on the balance sheet date.

Participations

These are valued at the moderate lower of cost or market principle and carried at amortized cost or a lower long-term fair value.

Write-downs are made if the amortized cost exceeds the market value and the long-term fair value at the balance sheet date.

Loans to affiliated enterprises in which a participating interest is held

This item includes loans.

These are valued according to the moderate lower of cost or market principle and carried at amortized cost. Write-downs are made if the amortized cost exceeds the market value and the long-term fair value at the balance sheet date.

Other investments

Stocks, investment fund units, bearer bonds, other fixed-income securities and other variable income securities

Marketable securities classified as current assets are valued at the strict lower of cost or market principle and carried at the lower of average acquisition cost or market value.

The investments recognized in the balance sheet in accordance with the regulation on fixed assets are intended to serve business operations on a permanent basis. An allocation of the purpose is made when the investment is received. The commitment is reviewed each time the investment strategy is changed or sales are planned.

These securities are valued according to the moderate lower of cost or market principle and carried at the lower of average acquisition cost or long-term fair value. In the case of permanent impairment, write-downs are charged to the statement of profit or loss.

A write-down option is available for expected temporary impairments. During the financial year, as in the previous year, the option was exercised not to recognize write-downs due to expected temporary impairments for economic reasons.

Mortgages, land charges and annuity claims

These are valued according to the moderate lower of cost or market principle and carried at amortized cost.

The difference between the acquisition cost and the redemption value is amortized on a straight-line basis over the life of the loan.

Write-downs are made if the amortized cost exceeds the market value and the long-term fair value at the balance sheet date.

Registered bonds, notes receivable and loans

These are valued according to the moderate lower of cost or market principle and carried at amortized cost.

The difference between the acquisition cost and the redemption value is recognized and amortized over the remaining term using the effective interest method.

Write-downs are made if the amortized cost exceeds the market value and the long-term fair value at the balance sheet date.

Bank deposits

These items are carried at face value.

Derivatives and structured products

AGCS SE uses currency derivatives to reduce the volatility of its annual results. These are individually valued. The upper valuation limits represent the acquisition cost. Premium deficiency reserves are established for negative market values.

For management purposes, currency derivatives are grouped into valuation units, each of which represents a portfolio in the respective currency.

The portfolio includes structured products in the form of loans, profit participation certificates and bearer bonds, which are accounted for on a uniform basis. They are valued and recognized according to the balance sheet item in which they are recorded.

Funds held by others under reinsurance business assumed

Pursuant to § 341c HGB these items are carried at face value.

Receivables and other assets

In detail:

- Accounts receivable on direct insurance business
- Accounts receivable on reinsurance business
- Other receivables
- Cash with banks, checks and cash on hand

These are valued at face value less repayments and less any necessary specific valuation adjustments. A general allowance for credit losses is established for accounts receivable from direct insurance business.

Reinsurance accounts receivable are netted for each contracting party.

- Tangible fixed assets, inventories and miscellaneous assets

These items are carried at acquisition cost less scheduled write-downs on straight-line basis over their estimated useful lives. Items of minor value worth up to € 250 (net) are written off immediately. A compound item for tax purposes was created in accordance with § 6 (2a) of the German Income Tax Act (EStG) for assets from € 250 to € 1,000 (net), which is depreciated by one fifth each year.

Deferred income

Deferred interest and rents are stated at their nominal amounts and other prepaid expenses at their nominal values.

Deferred tax assets

As a result of the existing fiscal entity for income tax purposes, deferred taxes are generally recognized at the level of the parent company by analogous application of §§ 274 HGB.

Significant differences between commercial and tax valuations arise from the investments and pension provisions and similar obligations, which each result in the recognition of deferred tax assets.

Deferred domestic taxes are calculated using a tax rate of 31 percent.

Excess of plan assets over pension and similar obligations

Pursuant to § 253 (1) HGB, assets are recognized at fair value and offset against liabilities in conjunction with § 246 (2) HGB.

If the liabilities exceed the fair value, the excess amount is reported under reserves. If the fair value exceeds the amount of the liabilities, the excess amount is reported under the item "Excess of plan assets over pension and similar obligations".

The accounting and valuation method of the excess of plan assets corresponds to that described in Section 17_Other reserves (Equity and liabilities C.).

Technical provisions

Unearned premiums

For direct insurance, unearned premiums are calculated using the daily method. Agents' commissions and other acquisition costs are deducted as non-transferable portions in accordance with tax regulations. For obligatory reinsurance business assumed, unearned premiums are determined based on information provided by the ceding insurers. The reinsurers' share deducted from the gross unearned premiums is predominantly calculated using the daily method, with deduction of non-transferable portions.

In the case of quota share cessions with original cost sharing, the pro rata unearned premiums are recognized in accordance with the quota share of the reinsurer.

Reserve for loss and loss adjustment expenses

The **gross reserve for direct insurance business** consists of the following partial reserves:

Reserves **for known insured losses** (excluding annuities) are measured individually for each claim according to the expected

benefit, and for participating business, according to the responsibilities of the leading insurers. The reserves for **claims settlement expenses which are attributable** to known insurance claims are established in the form of case-specific reserves in accordance with the expected payments. The partial loss reserve for **unallocated claims settlement expenses** is determined using a flat-rate approach based on historical settlement expenses as measured by claims paid and reserve development. **Late claims reserves** are established for incurred but not reported losses based on historical experience. For individual claims that are not yet known, late claims reserves for claims settlement expenses are calculated using actuarial methods similar to those used for **claims reserves for claims expenses. Receivables from subrogation, claims recoveries and distribution agreements** are deducted to the extent of their ascertainable or determinable recoverability.

Gross reserves for **assumed reinsurance business** are established for known claims in accordance with the obligations of the ceding companies. The corresponding late claims reserves are calculated on the basis of actuarial analyses.

For **reinsurance business ceded**, the reinsurers' share of the reserves for known claims is determined in accordance with the contractual agreements. The corresponding late claims reserves are calculated on the basis of actuarial analyses.

Equalization reserve and similar reserves

The annual claims equalization reserve and the reserves for nuclear, pharmaceutical and terrorist risks are calculated for the net retention portion pursuant to § 341h HGB in conjunction with §§ 29 and 30 of the Government Order on the External Accounting Requirements of Insurance Enterprises (RechVersV).

Other insurance reserves

Reserve for cancellations

The reserve for cancellations is determined on the basis of experience from previous years for direct insurance business.

Reserve for anticipated losses

The starting point for the assessment is the expected premium income as well as claims and cost developments for the respective line of business. The reserve is calculated taking into account proportional interest income expected for the retention only. The reserve is calculated as a total for the direct insurance business and the reinsurance business assumed. No reserve had to be set up in the financial year.

Reserve for profit-independent premium refunds

The reserve for profit-independent premium refunds is calculated on the basis of the premium, claims and cost development of one or more insurance contracts for the current business year, insofar as a premium refund is the subject of contractual agreements. If these relate to an observation period of several years, the provision is created as a precaution for amounts before the end of this period. In the financial year, the provision mainly includes amounts from reinsurance business assumed.

Other reserves

Other reserves are stated in the amount required to settle the obligation. In the case of a remaining term of more than one year, interest is

discounted at an interest rate of the Deutsche Bundesbank appropriate to the term.

The reserves for pensions are calculated according to actuarial principles. The conversion cost resulting from the first-time application of the German Accounting Law Modernization Act (Bilanzrechtsmodernisierungsgesetz – Bilmog) in 2010 have already been fully recognized as extraordinary expenses in the past.

Provisions for anniversary bonuses, phased-in early retirement and early retirement benefits are also calculated on an actuarial basis and fully recognized as liabilities.

In accordance with § 253 HGB, the settlement amount for pension obligations must be discounted at the average market interest rate of the last ten financial years and for other personnel obligations at the average market interest rate of the last seven financial years. § 253 (6) sentence 2 HGB states that if the valuation of pension obligations at the seven-year average interest rate results in a higher obligation than the valuation at the ten-year average interest rate, the difference is subject to a distribution ban. This distribution ban does not block the transfer of profits if there is a transfer-of-profit agreement.

In determining the discount rate, the company makes use of the simplification rule pursuant to § 253 (2) sentence 2 HGB (remaining term of 15 years), whereby, as in the previous year, an interest rate predicted as of the balance sheet date was used as a basis.

The resulting effect from a change in the discount rate is reported under Other Non-Underwriting Result.

Further explanations on the accounting treatment of pensions and similar obligations can be found in the notes to the financial statements under "Supplementary information on equity and liabilities" and under "Contingent liabilities".

Liabilities

In detail:

- Funds held under reinsurance business ceded
- Accounts payable on direct insurance business
- Accounts payable on reinsurance business
- Other liabilities

These liabilities are stated at the amounts payable on maturity.

The settlement liabilities from the reinsurance business are netted separately for incoming and outgoing reinsurance for each contractual partner.

Approximation and simplification methods

To the extent that calculations from ceding insurers are no longer received in time for the financial year, the underwriting entries are estimated on the basis of past experience, taking into account current developments.

Currency conversion

As a general rule, all business transactions are recorded in the original currency and converted into euros at the applicable daily rate (mean spot exchange rate).

At the balance sheet date, receivables and liabilities denominated in foreign currencies are translated at the mean spot exchange rate and valued in accordance with the rules of commercial law on currency translation. For remaining terms of one year or less, gains and

losses from currency translation are recognized in the statement of profit or loss pursuant to § 256a HGB.

Foreign currency reserves are calculated and revalued at the balance sheet date and translated at the mean spot exchange rate.

The costs of the real estate assets and the costs of the loans and land charge receivables are determined using the mean spot exchange rate at the time of acquisition. Fluctuations in value due to changes in exchange rates are recognized in the statement of profit or loss at the balance sheet date (strict lower of cost or market principle, taking into account the acquisition cost and realization principle).

For the valuation of investments denominated in foreign currencies, the fair value in the original currency is translated into euros at the mean spot exchange rate on the balance sheet date.

In the case of affiliated enterprises and participations, the moderate lower of cost or market principle is applied when comparing the acquisition cost in euros with the fair value in euros, taking into account the acquisition cost and realization principle.

For the other investments, the strict lower of cost or market principle is applied, taking into account the acquisition cost and realization principle, except for investments with a remaining term of one year or less.

The following applies to all investments: Foreign exchange gains and losses are separately determined, but not separately recognized in the foreign currency translation result.

The net effect of changes in foreign exchange rates and changes in the value of the original currency is recognized in write-ups and write-downs, and in the realized gains and losses on these asset classes and included in the net investment income.

For investments carried at amortized cost, changes in foreign exchange rates are included in the write-ups and write-downs and realized gains and losses of these investment categories and reported in net investment income, unless there is a credit rating-related write-down.

Requirement to reinstate original values, write-ups

Assets that have been written down to a lower fair value in prior years must be written up, if a higher value is attributed to these assets again at the balance sheet date.

The write-ups are made up to the amount of the amortized cost to a lower long-term fair value or to a lower market value.

9_AGCS Infrastrukturfonds GmbH invests in private equity funds. § 286 (3) sentence 1 no. 2 of the German Commercial Code (HGB) applies for the company. At the balance sheet date, the company held 10 fund investments with a total carrying amount of € 42,489,239.04 and existing repayment obligations totaling € 7,294,762.63.

5 _ Loans to affiliated enterprises (Assets B.II.2.)

This item includes 6 (6) profit participation certificates in the amount of € 254,555 (€ 249,062) thousand, which are securitized under Luxembourg law. The profit participation certificates contain a performance-related participation in the profits of the underlying investment. There is no obligation to make additional contributions. This item also includes loans totaling 447,416 (235,016) to Allianz SE and Allianz Technology SE. The increase compared to the previous year is mainly due to two new loans to Allianz SE in 2024.

Valuation methods to determine fair values

The fair value of the land and buildings was determined as of December 31, 2024 using the discounted cash flow method.

The fair value of shares in affiliated enterprises and participations is determined in different ways, depending on the purpose and size of the enterprise. Insurance companies and similar enterprises were valued by means of the capitalized earnings value method or using proportional equity. In the case of companies whose business purpose is essentially limited to the management of investments (asset holding companies), the look-through principle was used to determine the fair value. Various valuation methods were used for the assets used to

determine the net assets, such as the net asset value method, stock market values and the discounted cash flow method. Individual shares in affiliated enterprises were recorded at acquisition cost in the first year of the investment. Immaterial companies were carried at book value. A net asset value assessment is carried out in individual cases.

The fair value of stocks, units or shares in investment funds and other non-fixed-income securities, is based on the year-end market price, if available. The net asset value method was applied for real estate special funds. For all other special funds, the value communicated by the investment management company was applied.

The fair values of listed fixed-term securities, such as bearer bonds, profit participation certificates and other fixed-income securities, were determined using year-end stock market prices.

For unlisted fixed-term investments (loans, mortgages, other fixed-income investments), fair value was determined based on valuations from independent data providers or using the discounted cash flow method. This was calculated using the effective interest rate of similar debt instruments or a currency-specific SWAP curve, taking into account an individual spread per loan.

The fair value of loans to affiliated enterprises and loans to companies in which a participating interest is held is determined using the discounted cash flow method. This was calculated using the effective interest rate of similar debt instruments or a currency-specific SWAP curve, taking into account an individual spread per loan. The fair value of profit participation certificates issued to affiliated enterprises is determined and recorded based on the net asset value of the underlying investments.

The market value of asset-backed securities (ABS) is provided by independent commercial banks, if no stock market price is available. These are calculated (except in individual cases with a very small extent) using valuation models that are themselves based on readily observable market data.

8 _ Disclosures in accordance with § 285 No. 18 HGB on investments reported above their fair value

Fixed asset investments carried at amortized cost include hidden losses in the amount of € 125,947 (€ 116,086) thousand.

Loans, mortgages and land charges are mainly interest-related impairments, which are reversed at maturity. Based on our expectations of market developments, this is expected to be a temporary impairment.

No unscheduled depreciations were recognized in accordance with § 253 (3) sentence 6 HGB due to the temporary nature of the impairment.

The following table shows the composition of the hidden losses in the 2024 financial year:

Distribution of hidden losses

€ thousand

	Book value	Fair value	Hidden losses
Shares in affiliated enterprises	661	576	85
Loans to affiliated enterprises	396,319	374,110	22,209
Participations	4,562	4,376	186
Loans to affiliated enterprises in which a participating interest is held	29,718	27,087	2,631
Stocks, units or shares in investment funds and other variable income securities	1,932,603	1,835,648	96,955
Registered bonds	9,746	9,471	275
Notes receivable and loans	25,236	24,820	416
Mortgages	31,873	28,684	3,190
Total	2,430,718	2,304,772	125,947

Securities intended for the permanent investment of assets

€ thousand

	Fair value 12/31/2024	Balance sheet value 12/31/2024	Valuation reserves 12/31/2024	Fair value 12/31/2023	Balance sheet value 12/31/2023	Valuation reserves 12/31/2023
Stocks, units or shares in investment funds	3,054,200	3,077,469	-23,269	2,997,951	3,073,041	-75,090
Total	3,054,200	3,077,469	-23,269	2,997,951	3,073,041	-75,090

Stocks, units or shares in investment funds amounting to € 1,904,185 (1,907,195) thousand, which are treated as fixed assets in accordance with § 341b (2) HGB were recognized at their fair value of € 1,807,261 (€ 1,817,440) thousand. As a result, write-downs of € 96,924 (€ 89,755) thousand were avoided.

For units or shares in investment funds, a sustainable market value was determined using the capitalized earning value method based on the consensus earnings per share (EPS) estimate, taking into account pick-up criteria, which was used as the basis for the write-down. In the case of bonds in shares of investment funds, it was examined whether the nominal values of the bonds could generally be realized due to an interest-related or temporary reduction in value. As part of the credit assessment, default risk was also analyzed.

9 _ Miscellaneous assets (Assets D.III.)

This item consists mainly of FX derivatives in the amount of € 36,587 thousand and 231,729 options on Allianz SE shares, which are used to hedge corporate risks as part of the Allianz Equity Incentives. The acquisition cost of these options was € 41,867 thousand.

11 _ Excess of plan assets over pension liabilities/pension provisions (Assets F.)

A portion of the pension obligations is covered by reinsurance policies or offsettable plan assets.

An excess of plan assets over pension liabilities/pension provisions amounting to € 187 (€ 119) thousand resulted from the offsetting

of the remuneration obligations against the offsettable plan assets with regard to the phased-in early retirement obligations.

12_ Distribution ban

The non-deductible amount in accordance with § 268 (8) HGB in conjunction with § 301 AktG amounted to € 5,278 (3.078) thousand and relates entirely to the fair value assessment of assets in accordance with § 253 (1) HGB. The amount excluded from distribution is fully covered by unrestricted equity.

13_ Derivatives

Derivative financial instruments, structured products, mortgage-backed securities, and asset backed securities

Derivative financial instruments, structured products, mortgage-backed securities (MBS) and asset-backed securities (ABS) are used exclusively within the framework of the overall investment strategy, taking into account the provisions of § 15 (1) of the Insurance Supervision Act (VAG) and in accordance with the principles laid down by the German Federal Financial Supervisory Authority (BaFin).

To limit risk, additional company-specific requirements such as counterparty limits and stop-loss brands determined as part of internal risk control are also reviewed for compliance.

Forward foreign exchange transactions have been entered into in the portfolio for the purpose of currency hedging.

The following table shows the derivative positions directly held at the balance sheet date.

Nominal and fair values of open derivative positions

Total	2,730,384	1,982,224	26,395	-36,749

¹ Nominal values of underlying instruments lists the nominal values of the hedged investments.

Fair values are determined using financial market pricing methods and current yield curves.

14_ Valuation units

Share-based compensation plans

To hedge the share-based compensation plans (Allianz Equity Incentive Plans), forward transactions (hedge RSUs) are entered into with Allianz SE. These forward transactions are combined with the

corresponding hedged items as a valuation unit if a direct hedging relationship exists. The underlying transactions are included in Other reserves and the hedged items in Other assets.

A micro-hedge is used for the valuation units created in order to completely eliminate price change risks resulting from market price fluctuations.

The prospective and retrospective effectiveness of the valuation units for the share-based compensation plans expiring no later than 2028 is demonstrated by matching the conditions, parameters and risks (critical term match method).

As of the balance sheet date, the included underlying transactions, consisting of benefits expected to be settled in the future, amounted to € 41,867 (33,169) thousand. Valuation units are accounted for using the freezing method. The valuation units were used to hedge risks in the form of changes in value amounting to € 20,576 (€ 11,205) thousand.

Currency risks from loss reserves

Derivative financial instruments - FX forwards - are used to hedge foreign currency exposure arising from loss reserves denominated in USD, GBP and AUD. These hedging transactions are aggregated into valuation units, each of which represents a portfolio in the respective currency. The hedging relationships are designated as market value hedges within portfolio hedges.

FX forwards are grouped with the corresponding foreign currency portfolios in valuation units in order to minimize the impact of exchange rate fluctuations on the balance sheet. The volumes hedged represent 35-40% of gross loss reserves in the above currencies. The nominal amounts of the FX forwards entered into are USD 2,500,000 thousand, GBP 1,000,000 thousand and AUD 240,000 thousand. The maturities of the hedging transactions are three months in each case.

As long as the valuation parameters of the hedged item and the hedging transaction do not change during the term of the hedging relationship and the changes in value are expected to be fully offset, these offsetting changes are not recognized in the balance sheet. Ineffective portions of the hedging relationship are accounted for using general accounting principles. The ineffective portion relates to changes in value that are not exactly offset and is subject to the rules for individual valuation.

The effectiveness of hedging relationships is assessed both prospectively and retrospectively at each balance sheet date. Prospective effectiveness is determined by the currency and volume matching of the hedged item and the hedging instrument. Retrospective ineffectiveness is determined using the dollar offset method. This review ensures that hedging relationships remain effective. The hedging transactions are entered into for a period of three months and are periodically renewed to provide flexibility in response to fluctuations in loss reserves. The market values of FX forwards entered into for hedging purposes are valued on a regular basis. Negative market values are accounted for on a prudent basis through provisions for contingent losses (carry-forward method).

SUPPLEMENTARY INFORMATION ON EQUITY AND LIABILITIES

15 _ Issued capital (Equity and Liabilities A.I.)

The issued capital of € 36,741 thousand as of December 31, 2024 consisted of 36,740,661 fully paid registered no-par value shares with a notional value of € 1 per share.

The shares may only be transferred with the company's consent. Allianz SE is the sole shareholder of AGCS SE.

16 _ Capital reserve (Equity and Liabilities A.II) and Net Earnings (Equity and Liabilities A.IV)

As part of the plan agreed with Allianz SE to optimize capital allocation in the Allianz Group, € 380,000 thousand will be withdrawn from

the capital reserve pursuant to § 272 (2) No. 4 HGB and transferred to net earnings as of December 31, 2024.

The total distribution of € 380,000 thousand, which will be distributed equally to the no-par value shares entitled to dividend on the day of the Annual General Meeting, will be paid to Allianz SE in 2025 in accordance with the resolution and subject to the approval of the Annual General Meeting.

The distribution amount is due for payment on April 29, 2025 (the first business day after the resolution of the Annual General Meeting, see section 58 (4) sentence 3 AktG).

16_ Gross insurance reserves (included in Equity and Liabilities B.)

¹ In addition to the individual insurance lines, insurance branches and types of insurance listed above, the total also includes insignificant amounts for the overall business of AGCS SE for the assistance insurance line of business with a gross premium of less than € 3,000 thousand.

17 _ Other reserves (Equity and Liabilities C.)

Reserves for pensions and similar obligations

AGCS SE has made pension commitments for which pension provisions have been established. Part of these pension obligations is secured by a "Contractual Trust Arrangement" (Methusalem Trust e.V.). These trust assets constitute an offsettable plan asset, the fair value of which is based on the asset value/market value.

The settlement amount is calculated on the basis of the projected unit credit method (this refers to a projected unit credit method based on the accrued portion) or is reported as the present value of the acquired entitlement. For security-based pension obligations, the fair value of the offsetting assets is used.

Calculation parameters

%	2024	2023
Discount rate (10-year average):	1.90	1.83
Discount rate (7-year average):	1.97	1.76
Pension trend ¹	2.00	2.00
Assumed salary increase (incl. average career trend)	3.25	3.25

¹ In the prior year, an increased pension trend rate of 5.5% per year was used for the period 2022 to 2024 due to high inflation. The backlog of inflation is now reflected in the pension adjustment beginning January 1, 2025.

Notwithstanding the above, some of the pension commitments are based on the guaranteed pension dynamic of 1% per year.

The biometric calculations are based on the Heubeck RT2018G mortality tables, which have been adjusted to reflect the company's specific mortality, morbidity and fluctuation rates.

Retirement age is the earliest possible contractual or legal retirement age.

Supplementary information

€ thousand	2024	2023
Acquisition cost of the offset assets	160,124	152,029
Fair value of the offset assets	167,772	156,491
Settlement amount of the offset liabilities	179,932	168,571

Provisions for pensions and similar obligations amounted to € 12,057 (€ 12,040) thousand, in the year under review.

In accordance with Article 67(2) of the Introductory Act to the German Commercial Code (EGHGB), there are no unrecognized reserves.

The settlement amount of the offset liabilities calculated using the 7-year average interest rate as of December 31, 2024 was € 179,099 (€ 169,453) thousand. An amount of € 0 (882) thousand is excluded from distribution in accordance with § 253 (6) sentence 2 HGB.

Tax reserves

In the year under review tax reserves of € 55,904 (€ 68,777) thousand were recognized primarily in Germany and at the branch offices in France, Spain, Belgium, Singapore, Sweden, Denmark, Korea, India and Italy.

Other reserves

Anniversary and phased-in early retirement commitments and Allianz long-term credit account

AGCS SE has obligations arising from jubilee payments, a long-term credit account and phased-in early retirement and early retirement agreements, which are reported under Other reserves.

The assets held as a reserve to cover the phased-in early retirement plan and the long-term credit account obligations in Methusalem Trust e.V. comprise offsettable plan assets, the fair value of which is based on the asset value/market value.

These obligations are valued in essentially the same way as pension obligations and based on the same accounting assumptions (except for the discount rate).

Supplementary information

€ thousand	2024	2023
Acquisition cost of the offset assets	3,778	3,856
Fair value of the offset assets	8,378	7,941
Settlement amount of the offset liabilities	9,183	8,671

The Other reserves for the 2024 financial year include the following positions:

Composition of Other reserves

€ thousand	2024	2023
Remunerations not yet finalized	69,104	82,767
Invoices not yet received	72,279	64,503
Allianz Equity Incentives	27,600	18,252
Holidays and flexible working hours	16,044	15,440
Restructuring	8,530	10,664
Provisions for contingent losses	6,199	52,983
Employee anniversaries	3,583	3,864
Other	26,351	15,178
Total	229,688	263,651

Plan assets

The acquisition cost of the assets (pensions, phased-in early retirement obligations and long-term credit accounts) amounted to € 163,902 (€ 155,885) thousand and the fair value to € 176,150 (€ 164,432) thousand. The settlement amount was € 189,115 (€ 177,242) thousand.

18 _ Funds held with reinsurance business ceded (Equity and Liabilities D.)

This item of € 3,141,749 (€ 2,695,450) thousand mainly includes amounts from the net quota share reinsurance treaties with Allianz SE, of which € 3,031,145 (€ 2,686,100) thousand have a remaining term of less than one year.

This page has been intentionally left blank.

	2024	2023
a) Investment management expenses, interest expenses and other charges for investment ¹	10,566	12,006
b) Write-downs on investments	24,312	37,441
c) Losses on the disposal of investments ¹	1,622	1,780
d) Cost of loss absorption	-	-
Total	36,499	51,226

26_ Write-down on investments

Write-downs on investments amounted to € 24,312 (€ 37,441) thousand. This includes scheduled write downs on land and buildings of € 1,522 (€ 1,231) thousand, unscheduled write downs on land and buildings of € 191 (€ 3,485) thousand, unscheduled write-downs of € 9,111 (€ 7,392) thousand on investments valued in accordance with the provisions for fixed assets pursuant to § 253 (3) HGB and unscheduled write-downs of € 13,487 (€ 25,336) thousand on investments valued in accordance with the provisions for current assets pursuant to § 253 (4) HGB.

Of the unscheduled write-downs € 9,111 (€ 7,189) thousand relate to affiliated enterprises and participations, € 7,185 (€ 12,333) thousand to shares, interests or shares in investment funds and other variable-yield securities, € 6,302 (€ 13,003) thousand to bearer bonds and other fixed-income securities and € 0 (€ 203) thousand to registered bonds.

27_ Write-downs on intangible assets

Scheduled write-downs on intangible assets pursuant to § 253 (3) HGB amounted to € 14 (€ 39) thousand in the year under review, taking into account the respective durability.

28_ Other income and other expenses (statement of profit or loss II.3/4)

The following income and expenses have been offset as a result of the offsetting of assets and liabilities in accordance with § 246 (2) HGB:

€ thousand

	Pensions and similar obligations 2024	Other obligations 2024	Pensions and similar obligations 2023	Other obligations 2023
Income from the fair value of the offset assets	6,794	301	5,127	200
Calculated interest on the settlement amount of the offset liabilities	-6,541	-334	-4,323	-231
Effect from the change in the discount rate for the settlement amount of the offset liabilities	848	6	502	10
Net amount of the offset income and expenses	1,101	-26	1,306	-21

Also included are currency translation losses of € 265,028 thousand (gain of € 73,691 thousand in the prior year) and interest expenses of € 57,763 (€ 32,372) thousand on funds held for reinsurance counterparties.

There were also losses on currency derivatives of € 92,122 (€ 13,275) thousand.

29_ Income taxes (statement of profit or loss II.7.)

For AGCS SE, the higher taxable income at the branch offices in the Netherlands, Sweden and the United Kingdom compared to the previous year, mainly resulted in higher income taxes of € 96,261 (€ 75,560) thousand.

Implementation of Global Minimum Tax

As a fully consolidated affiliated enterprise of the Allianz Group, AGCS SE falls within the scope of the OECD Pillar Two Model Rules. According to these rules, an additional tax has to be paid for each tax jurisdiction on the difference between the effective tax rate of the Global Anti-Base Erosion (GloBE) and the minimum tax rate of 15 percent. In Germany, the country in which the Company is domiciled, the local Pillar 2 legislation (minimum tax law) became effective on January 1, 2024. As it can be assumed that the effective GloBE tax rate of all Allianz companies in Germany will be above the minimum rate of 15%, no additional supplementary tax is expected for AGCS SE. Any transitional relief provided by the OECD Pillar 2 regulations will be used to

the extent possible to reduce the administrative burden of compliance and reporting.

30_ Appropriation of earnings

Before profit transfer, the profit for the 2024 financial year amounted to € 378,660 thousand (profit of € 392,965 thousand), which was transferred to Allianz SE under the terms of the existing profit transfer agreement.

OTHER INFORMATION

Contingent liabilities

There are contingent liabilities in connection with the pension plan. The company pension plan for employees of German Allianz companies who joined on or before December 31, 2014, is generally based on membership in Allianz Versorgungskasse VVaG (AVK), which is a legally independent and regulated pension fund supervised by the Federal Financial Services Supervisory Authority (BaFin). The benefits provided by the AVK are funded under the single premium system by contributions from the sponsoring companies to the fund through deferred compensation and employer contributions.

In addition to Allianz SE, Allianz Versicherungs-AG and Allianz Lebensversicherungs-AG, AGCS SE is also one of the sponsoring companies.

AGCS SE is legally obligated to pay a share of the administrative costs of the AVK and to make employer contributions as required.

In addition, the sponsoring companies make contributions to Allianz Pensionsverein e.V. (APV) for employees who joined the company on or before December 31, 2014.

Since the adjustment obligations pursuant to § 16 (2) of the German Company Pension Act (Betriebsrentengesetz – BetrAVG) are not covered at the old APV rate, the plan assets of the APV were lower than the pension obligations as of December 31, 2023. The shortfall as of December 31, 2024 amounted to € 39,047 (€ 43,261) thousand.

The company generally exercises the option under Section 28 (1) Sentence 2 EGHGB not to establish a provision for uncertain liabilities in this regard, as the legally required adjustment of pensions to the consumer price index is financed by additional contributions to the APV.

Both the AVK and the APV have been closed to new entrants as of January 01, 2015.

For new hires as of January 1, 2015, the pension plan has been uniformly restructured. For these new employees, AGCS SE pays a monthly contribution to a direct insurance plan with Allianz Lebensversicherungs-AG, which is financed within the framework of deferred compensation. In addition, a monthly employer contribution is made in the form of a direct commitment.

Allianz SE has assumed joint and several liability for part of the pension obligations of AGCS SE. The latter reimburses the costs; Allianz SE has undertaken to fulfill these obligations. The pension obligations are therefore reported by Allianz SE and not by the company.

Companies may only reimburse the cost of work services to their employees as of January 1, 2017. There are no longer any refunds for interest, inflation or biometric risks.

The Company's joint and several liability for these pension obligations and these recourse claims against Allianz SE, which are netted against these liability obligations, amounts to:

Settlement amount of the offset liabilities	86,423	90,371
Joint liability and/or recourse claims against Allianz SE	86,423	90,371

Liabilities may also arise from co-insurance and management clauses, and from related hedging arrangements.

AGCS SE has issued a directly enforceable guarantee for the unpaid share of AGCS Holding International B.V., Amsterdam, in the equity of Allianz Risk Transfer AG, Schaan, in the amount of € 92.1 (€ 92.1) mn.

AGCS SE enters into contingent liabilities only after careful consideration of the risks involved. On the basis of a continuous evaluation of the risk situation of the contingent liabilities entered into and taking into account the knowledge gained up to the preparation date, it can be concluded that the obligations underlying the contingent liabilities can be met by the respective principal debtors.

AGCS SE therefore does not consider the risk of a claim to be probable for any of the liability relationships listed.

Statutory obligations

Statutory obligations to absorb losses arise from control and profit transfer agreements with the following companies:

- AGCS-Argos 76 Vermögensverwaltungsgesellschaft mbH, Munich
- AGCS-Argos 86 Vermögensverwaltungsgesellschaft mbH, Munich
- AGCS Infrastrukturfonds GmbH, Munich.

Other financial obligations

As of the balance sheet date, there were no liens on capital investments in connection with intra-group cessions, nor were there any such liens with affiliated enterprises. A total of € 456,418 (€ 462,235) thousand was deposited in trust accounts, of which € 431,144 (€ 438,954) thousand was for the benefit of affiliated enterprises. These contingent liabilities will only be utilized if AGCS SE is unable to meet its obligations under the reinsurance business. In view of AGCS SE's solid capitalization and the adequate reserves, the risk of such a claim is considered to be very low.

Other financial obligations from purchase contracts amounted to € 45,282 (€ 41,989) thousand, in particular from real estate purchase contracts of € 7,127 (€ 13,937) thousand.

Payment obligations under long-term leases amounted to € 18,905 (€ 28,655) thousand, of which € 5,011 (€ 9,337) thousand were due to affiliated enterprises.

There were residual payment obligations of € 39.5 (€ 39.5) mn to Allianz Risk Transfer AG, Schaan, for shares not fully paid in.

Accordingly, total other financial obligations amounted to € 103,687 (€ 110,144) thousand.

Information on the members of the executive bodies

The information required by § 285 No. 10 HGB on the members of the Supervisory Board and the Board of Management can be found in the notes to the financial statements on [page 3](#). Also listed on [page 3](#) are all current members of the Board of Management and those who retired in the financial year.

Remuneration of the Board of Management and the Supervisory Board

The total remuneration of the Board of Management (including stock-based compensation granted in the financial year) amounted to € 12,812 (€ 12,918) thousand in the year under review. A total of 30,669 (30,843) restricted stock units were issued to the members of the Board of Management as part of the stock-based compensation. The fair value of these units at the time they were granted amounted to € 5,959 (€ 5,314) thousand.

The total remuneration of former members of the Board of Management and their surviving dependents (including pension payments) amounted to € 272 (€ 223) thousand in the year under review. The pension obligations are as follows:

Pension obligations of the company towards former members of the Board of Management/managing directors

€ thousand

	2024	2023
Fair value of the offset assets	26,182	21,746
Settlement amount of the offset liabilities	29,835	25,029
Pension provisions	3,653	3,283

The figures in the table also include shares held centrally by Allianz SE.

The total remuneration of the Supervisory Board of AGCS SE amounted to € 64 (€ 66) thousand.

Average number of employees

Excluding Board of Management members, trainees, interns, employees in the passive phase of phased-in early retirement and in early retirement, on parental leave or in voluntary military service/federal voluntary service.

Average number of employees

	2024	2023
Full-time employees	2,411	2,278
Part-time employees	264	243
Total	2,675	2,521

Services provided by the auditor of the annual financial statements

PricewaterhouseCoopers GmbH Wirtschaftsprüfungsgesellschaft conducted the audit of the annual financial statements and the Solvency Overview of AGCS SE. With respect to the overall Group audit and the Group Solvency Overview, limited reviews of quarterly and half-yearly financial statements were conducted, as well as the review of Group packages. In the context of sustainability reporting, the CSRD Group packages were also audited at mid-year and at the end of the year under review.

Total remuneration of the auditor pursuant to § 285 no. 17 HGB

The total remuneration of the auditor is disclosed in the consolidated financial statements of Allianz SE, Munich.

Group affiliation

AGCS SE is a member of the Allianz Group headed by Allianz SE, Munich. The consolidated financial statements and the management report of Allianz SE are published in the Annual Report of Allianz SE in March and in the Federal Gazette (Bundesanzeiger) following the Annual General Meeting in May. They can be viewed there or can be requested from our company. They will also be made available on the Allianz SE website.

AGCS SE is included in the consolidated financial statements and management report of Allianz SE, which prepares consolidated financial statements for the largest and smallest group of companies. The consolidated financial statements and the management report legally exempt our company from further reporting obligations, so that AGCS SE does not prepare its own consolidated financial statements and management report.

Significant events after the balance sheet date

There have been no significant events since the end of the reporting period.

INDEPENDENT AUDITOR'S REPORT

To Allianz Global Corporate & Specialty SE, Munich

Report on the audit of the annual financial statements and the management report

Audit Opinions

We have audited the annual financial statements of Allianz Global Corporate & Specialty SE, Munich, Germany, which comprise the balance sheet as of December 31, 2024, and the income statement for the financial year from January 1 to December 31, 2024 and notes to the financial statements, including the presentation of the accounting and valuation methods. In addition, we have audited the management report of Allianz Global Corporate & Specialty SE for the financial year from

January 1 to December 31, 2024. In accordance with the German legal requirements, we have not audited the content of the statement on corporate governance pursuant to § 289f (4) HGB (disclosures on the quota for women on executive boards).

In our opinion, based on the findings of our audit,

- the accompanying annual financial statements comply, in all material respects, with the requirements of German commercial law and give a true and fair view of the assets, liabilities and financial position of the Company at December 31, 2024, and of its financial performance for the financial year from January 1 to December 31, 2024 in compliance with the German Legally Required Accounting Principles and
- the accompanying management report as a whole provides an appropriate view of the company's position. In all material respects, this management report is consistent with the annual financial statements, complies with German legal requirements and appropriately presents the opportunities and risks of future development. Our audit opinion on the management report does not cover the content of the statement on corporate governance referred to above.

Pursuant to § 322 (3) Sentence 1 HGB, we declare that our audit has not led to any reservations relating to the legal compliance of the annual financial statements and of the management report.

Basis for the Audit Opinions

We conducted our audit of the annual financial statements and of the management report in accordance with § 317 HGB and the EU Audit Regulation (No 537/2014, referred to subsequently as "EU Audit Regulation")

in compliance with German Generally Accepted Standards for the audit of financial statements promulgated by the Institut der Wirtschaftsprüfer [Institute of Public Auditors in Germany] (IDW). Our responsibilities under those requirements and principles are further

described in the "Auditor's Responsibilities for the Audit of the Annual Financial Statements and of the Management Report" section of our auditor's report. We are independent of the Company in accordance with the requirements of European law and German commercial and professional law, and we have fulfilled our other German professional responsibilities in accordance with these requirements. In addition, in accordance with Article 10 (2) point (f) of the EU Audit Regulation, we declare that we have not provided non-audit services prohibited under Article 5 (1) of the EU Audit Regulation. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinions on the annual financial statements and on the management report.

Key Audit Matters in the Audit of the Annual Financial Statements

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the annual financial statements for the

financial year from January 1 to December 31, 2024. These matters were addressed in the context of our audit of the annual financial statements as a whole, and in forming our audit opinion thereon; we do not provide a separate audit opinion on these matters.

In our view, the matters of most significance in our audit were as follows:

1. Measurement of shares in affiliated companies and other equity investments
2. Application of § 341b Abs. [paragraph] 2 Satz [sentence] 1 HGB
3. Measurement of the provision for unsettled claims

Our presentation of these key audit matters has been structured in each case as follows:

1. Matter and issue
2. Audit approach and findings
3. Reference to further information

Hereinafter we present the key audit matters:

1. Measurement of shares in affiliated companies and other equity investments

1. In the annual financial statements of the Company, investments in affiliated enterprises and participations amounting to EUR 2,606,908 thousand (18.6 % of total assets) are reported under the "Investments in affiliated companies and other equity investments" balance sheet item. Investments in affiliated enterprises and participations are measured in accordance with German commercial law at the lower of cost and fair value. In the case of investments in affiliated enterprises and participations that are not measured on the basis of stock exchange or other market prices, the dividend discount method is used for all material operating entities (property insurers and asset management companies). In the case of entities whose objects are primarily limited

to managing investments (investment holding companies), fair-value measurement is based on the fair values of the respective underlying investments, which are determined using different valuation techniques (e.g., net asset value, discounted cash flow method). Under the dividend discount method, fair-value measurement is based on the planning projections prepared by the executive directors. The executive directors also factor in judgments, estimates and assumptions, in particular about future business development and the effects of changes in macroeconomic factors on the business operations of the affiliated enterprises and long-term investees.

The discount rate used in the context of the dividend discount method is the individually determined cost of capital for the relevant equity investment. Minor changes to those assumptions and to the methods used can have a material impact on the measurement of investments in affiliated enterprises and participations. Based on the determined values and further documentation, a write-up requirement of € 576 thousand and a write-down requirement of € 9,111 thousand resulted for the financial year. Due to the material significance of the amounts of investments in affiliated enterprises and participations for the assets, liabilities and financial performance of the company and as well as the considerable scope for judgment on the part of the executive directors and the related uncertainties in the estimations made, the measurement of investments in affiliated enterprises and participations was of particular significance in the context of our audit.

2. Given the significance of investments in affiliated enterprises and participations, as part of our audit we evaluated the methodology used by the Company for the purposes of measuring the equity investments and assessed the assumptions made by the executive directors. The assessment was based on our industry knowledge, our expertise in valuing investments and our experience in the sector, among other things. We assessed the Company's valuation process, including the design and effectiveness of the controls established. On that basis, we conducted tests of details on the measurement of selected investments in affiliated enterprises and participations. We selected these on a risk-oriented basis with respect to their size and significance for the Company's annual financial statements, as well as in instances where there were specific indications that impairment was permanent. Our tests of details included assessing the selected measurement methods and their consistent application, and the mathematical correctness of the procedure applied. We also reviewed the appropriateness of the assumptions underlying the measurement (the budget, identification of the discount rate and assumptions regarding perpetuities). Based on our audit procedures, we were able to satisfy ourselves that the estimates and assumptions made by the executive directors for the purpose of measuring the investments in affiliated enterprises and participations are substantiated and sufficiently documented.
3. The Company's disclosures relating to the measurement of investments in affiliated enterprises and participations are contained in the sections entitled "Accounting, valuation and calculation methods" and "7_Fair values of investments" of the notes to the financial statements.

2. Application of § 341b Abs. [paragraph] 2 Satz [sentence] 1 HGB

1. In accordance with § 341b Abs. [paragraph] 2 Satz [sentence] 1 HGB, insurance companies may reclassify certain investments that are intended to be used permanently for business operations as fixed assets and subsequently value them in accordance with the rules applicable to fixed assets. The Company has made use of the provision of Section § 341b Abs. [paragraph] 2 Satz [sentence] 1 HGB and has valued the investments in the amount of EUR 3,077,469 thousand as fixed assets. In this case, unscheduled write-downs to the lower fair value are recognized only if the impairment is expected to be permanent (moderate lower of cost or market principle), and only temporary impairments are carried forward to subsequent years as unrealized losses in the amount of EUR 96.924 thousand. A designation as a permanent benefit to the business requires the intent and ability to hold these investments on a permanent basis.

The application of section § 341b Abs. [paragraph] 2 Satz [sentence] 1 HGB was of particular importance in the context of our audit due to the extent of the hidden losses carried forward as a result of the moderate lower of cost or market principle and the discretionary powers of the executive directors in the assessment of the intention and ability to hold the investments on a permanent basis.

2. As part of our audit, we assessed the assumptions made by the executive directors together with our internal investment specialists in view of the significance of the reclassification made by the executive directors, including the estimates regarding the intention and ability to hold the assets, liabilities, financial position and profit or loss for the presentation of the net assets, financial position and results of operations of the Company. In this context, we also assessed the executive directors' estimate as to the impact of the interest rate developments on the valuation of the investments. In assessing existing hidden losses, we evaluated the extent to which the requirements for the intention and ability to hold the assets on a permanent basis were met and existing impairments were not expected to be permanent. Among other things, we evaluated the Company's liquidity planning, in particular with respect to major losses, maturity structure, reinvestment and assumptions regarding lapses and new business. We also evaluated the specifics of the reinsurance business underwritten. Based on our audit procedures, we were able to satisfy ourselves that the estimates made by the executive directors for investments classified as fixed assets in accordance with § 341b Abs. [paragraph] 2 Satz [sentence] 1 HGB are substantiated and sufficiently documented.
3. The Company's disclosures relating to the measurement of investments in affiliated enterprises and participations are contained in the sections entitled "Accounting, valuation and calculation methods" and "8 _ Disclosures in accordance with Section 285 No. 18 HGB on investments reported above their fair value" of the notes to the financial statements.

3. Measurement of the provision for unsettled claims

1. In the annual financial statements of the Company, EUR 13,484,997 thousand gross (96.0 % of total assets)/EUR 5,041,244 net (35.9 % of total assets) of technical provisions (i.e. claim provisions) are reported under the balance sheet item "Reserves for loss and loss adjustment expenses". Insurance companies are required to recognize technical provisions to the extent necessary in accordance with prudent business judgment to ensure that they can meet their obligations from insurance contracts on a long-term basis. Defining assumptions for the purpose of measuring the technical provisions requires the Company's executive directors, in addition to complying with the requirements of German commercial law and regulatory law, to make estimations of future events and to apply appropriate measurement methods. This also includes the expected impact of higher inflation rates on the recognition of the claims provisions.

The methods used to determine the amount of the claims provisions and the calculation parameters are based on judgments and assumptions made by the executive directors. In particular the lines of business with long claims settlement periods, low loss frequency or high individual losses are usually subject to increased estimation uncertainties and consequently require a high degree of judgment by the Company's executive directors. Minor changes to those assumptions or to the methods used may have a material impact on the measurement of the claims provisions. Due to the material significance of the amounts of these provisions for the assets, liabilities and financial performance of the Company as well as the scope for judgment on the part of the executive directors and the associated estimation uncertainties, the measurement of the claims provisions was of particular significance in the context of our audit.

2. Given the significance of the claims provisions for the Company's overall business, as part of our audit we worked together with our internal valuation specialists to assess the assumptions made by the executive directors and used by the Company. Thereby, we based our assessment on our industry expertise and experience, among other things, and considered recognized methods. We also evaluated the design and effectiveness of the controls established by the Company for the purpose of calculating and recording claims provisions. On that basis, we carried out additional analytical audit procedures and tests of details relating to the measurement of the claims provisions. Among other things, we also reconciled the data on which the calculation of the settlement amount was based with the underlying documentation. Thereby, we assessed the results of the Company's calculations of the amount of the provisions with reference to the applicable legal requirements and evaluated the consistent application of the measurement methods and the allocation of amounts to the correct periods. In this context, we also assessed the executive directors' estimate as to the impact of the higher inflation rates on the lines of business concerned. Based on our audit procedures, we were able to satisfy ourselves that the estimates and assumptions made by the executive directors for the purpose of measuring the claims provisions are substantiated and sufficiently documented.
3. The Company's disclosures on the measurement of reserves for loss and loss adjustment expenses can be found under "Reserves

for loss and loss adjustment expenses" in the section entitled "Accounting, valuation and calculation methods" and 16_ Gross insurance reserves (included in Equity and Liabilities B.) of the notes to the financial statements.

Other Information

The legal representatives are responsible for the other information. The other information comprises the statement on corporate governance pursuant to § 289f (4) HGB (disclosures on the quota for women on executive boards) as a component of the management report not audited in terms of content.

The other information comprises further all remaining parts of the annual report – excluding cross-references to external information – with the exception of the audited annual financial statements, the audited management report and our auditor's report.

Our audit opinions on the annual financial statements and on the management report do not cover the other information, and consequently we do not express an audit opinion or any other form of audit conclusion thereon.

In connection with our audit, our responsibility is to read the other information mentioned above and, in so doing, to consider whether the other information

- is materially inconsistent with the annual financial statements, with the management report disclosures audited in terms of content or with our knowledge obtained in the audit, or
- otherwise appears to be materially misstated.

Responsibilities of the Executive Directors and the Supervisory Board for the Annual Financial Statements and the Management Report

The executive directors are responsible for the preparation of the annual financial statements that comply, in all material respects, with the requirements of German commercial law, and that the annual financial statements give a true and fair view of the assets, liabilities, financial position and financial performance of the Company in compliance with German Legally Required Accounting Principles. In addition, the executive directors are responsible for such internal control as they, in accordance with German Legally Required Accounting Principles, have determined necessary to enable the preparation of annual financial statements that are free from material misstatement, whether due to fraud (i.e., fraudulent financial reporting and misappropriation of assets) or error.

In preparing the annual financial statements, the executive directors are responsible for assessing the Company's ability to continue as a going concern. They also have the responsibility for disclosing, as applicable, matters related to going concern. In addition, they are responsible for financial reporting based on the going concern basis of accounting, provided no actual or legal circumstances conflict therewith.

Furthermore, the executive directors are responsible for the preparation of the management report that as a whole provides an appropriate view of the Company's position and is, in all material respects,

consistent with the annual financial statements, complies with German legal requirements, and appropriately presents the opportunities and risks of future development. In addition, the executive directors are responsible for such arrangements and measures (systems) as they have considered necessary to enable the preparation of a management report that is in accordance with the applicable German legal requirements, and to be able to provide sufficient appropriate evidence for the assertions in the management report.

The Supervisory Board is responsible for overseeing the company's financial reporting process for the preparation of the annual financial statements and of the management report.

Auditor's Responsibilities for the Audit of the Annual Financial Statements and of the Management Report

Our objectives are to obtain reasonable assurance about whether the annual financial statements as a whole are free from material misstatement, whether due to fraudulent action or error, and whether the management report as a whole provides an appropriate view of the company's position and, in all material aspects, is consistent with the annual financial statements and the knowledge obtained in the audit, complies with the German legal requirements and appropriately presents the opportunities and risks of future development, as well as to issue an auditor's report that includes our audit opinions on the annual financial statements and on the management report.

Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with § 317 HGB and the EU Audit Regulation and in compliance with German Generally Accepted Standards for Financial Statement Audits promulgated by the Institut der Wirtschaftsprüfer (IDW) will always detect a material misstatement. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these annual financial statements and this management report.

We exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the annual financial statements and of the management report, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our audit opinions. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal controls.
- Obtain an understanding of internal controls relevant to the audit of the annual financial statements and of arrangements and measures (systems) relevant to the audit of the management report in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an audit opinion on the effectiveness of the internal controls of the Company or these arrangements and measures.

- Evaluate the appropriateness of accounting policies used by the executive directors and the reasonableness of estimates made by the executive directors and related disclosures.
- Conclude on the appropriateness of the executive directors' use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in the auditor's report to the related disclosures in the annual financial statements and in the management report or, if such disclosures are inadequate, to modify our respective audit opinions. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Company to cease to be able to continue as a going concern.
- Evaluate the overall presentation, structure and content of the annual financial statements, including the disclosures, and whether the annual financial statements present the underlying transactions and events in a manner that the annual financial statements give a true and fair view of the assets, liabilities, financial position and financial performance of the Company in compliance with German Legally Required Accounting Principles.
- Evaluate the consistency of the management report with the annual financial statements, its conformity with German law, and the view of the Company's position it provides.
- Perform audit procedures on the prospective information presented by the executive directors in the management report. On the basis of sufficient appropriate audit evidence we evaluate, in particular, the significant assumptions used by the executive directors as a basis for the prospective information, and evaluate the proper derivation of the prospective information from these assumptions. We do not express a separate audit opinion on the prospective information and on the assumptions used as a basis. There is a substantial unavoidable risk that future events will differ materially from the prospective information.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal controls that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with the relevant independence requirements, and communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, actions taken to eliminate threats or safeguards applied.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the annual financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter.

Other Legal and Regulatory Requirements

Further Information pursuant to Article 10 of the EU Audit Regulation

We were elected as auditor by the annual general meeting on April 23, 2024. We were engaged by the Supervisory Board on September 25, 2024. We have been the auditor of the Allianz Global Corporate & Specialty SE, Munich, without interruption since the financial year 2018.

We declare that the audit opinions expressed in this auditor's report are consistent with the additional report to the audit committee pursuant to Article 11 of the EU Audit Regulation (long-form audit report).

German Public Auditor responsible

The German Public Auditor responsible for the engagement is Dennis Schnittger.
